

MASTERVOLT POWERBOOK 2022

*MASTERVOLT*Feel the Power

Mastervolt is part of Advanced Systems Group (ASG) by Brunswick. ASG is the world's leading supplier of products and integrated systems to the marine, RV, and Specialty Vehicle industries. The broad portfolio of market leading brands in power management, digital control and monitoring, electrical components, networking devices and water systems are distributed globally to a diverse aftermarket and OEM customer base. ASG is driven, every day, to be the world's most trusted partner to the marine and mobile industries.

Mastervolt battery chargers, inverters, batteries, monitoring panels and integrated systems offer the best value that money can buy. Our comprehensive product portfolio, with a range from 300 W to 40 kW, is built to be robust and withstand the harshest of environments. And this expertise is offered to you in our four core business areas:

As part of the Brunswick group, ASG EMEA can also offer you access to top brands like Ancor, Attwood, BEP, Blue Sea Systems, CZone, Garelick, Lenco, Marinco, Motorguide, ProMariner and Whale. This unified approach means that the very latest technologies can be integrated within your application from a single point of contact.

This Powerbook is much more than a catalogue. It is designed to provide you with clear explanations and technical specifications that will enable you to make smart choices that reflect your particular requirements. We update it regularly to reflect the changing world in which we live and the Powerbook offers a valuable reference point throughout the year.

Please also take the time to visit mastervolt.com, where we share case studies of real-life systems and sponsor projects, including the Volvo Ocean Race and vehicles that have travelled to Antarctica on solar energy. In addition to extended information on Mastervolt products, the website includes image downloads, manuals, certificates and installation drawings. Also offering a comprehensive FAQ section, technical glossary and a wealth of general information about electricity, mastervolt.com gives you the power to be independent.

ADVANCED SYSTEMS GROUP EMEA VISION

Your most trusted partner

Whether on water or on the road, delivering an optimal user experience is at the heart of ASG's business. It's why we are proud to be the world's leading supplier of products and integrated systems to the marine, RV, and Specialty Vehicle industries. Our broad portfolio of market leading brands in power management, digital control & monitoring, water systems and networked devices are distributed globally to a diverse aftermarket and OEM customer base. ASG is driven, every day, to be the world's most trusted partner to the marine and mobile industries.

We invite you to browse

through this Powerbook as

Great products and great service. The hallmark of Mastervolt.

Advanced Systems Group by Brunswick is the world's leading supplier of products and integrated systems to the marine, RV, and Specialty Vehicle industries. ASG is driven, every day, to be the world's most trusted partner to the marine and mobile industries.

Stronger together

The brand Mastervolt is part of Advanced Systems Group by Brunswick, which includes a broad portfolio of market leading brands in power management, digital control and monitoring, electrical components, networking devices and water systems. All products are distributed globally to a diverse aftermarket and OEM customer base. The brands Ancor, Attwood, BEP, Blue Sea Systems, CZone, Garelick, Lenco, Marinco, Motorguide, Mastervolt, ProMariner, RELiON and Whale form this strong product portfolio.

Superior service

The capacity to innovate is what truly sets ASG EMEA apart. Our added value is to offer products, technologies and systems of the highest quality coupled with superior global service. The passion and commitment of our people make the difference.

Breakthrough technology, optimum performance

Mastervolt has been a strong, innovation-driven brand since its founding in 1991. Product development takes place in Amsterdam (The Netherlands), where our engineers are continuously searching for new ways to connect breakthrough technology ensuring optimum performance.

Why Advanced Systems Group EMEA?

The ASG EMEA philosophy is based on six pillars

Worldwide Network

Top class expertise and support is available throughout the world's three geographical regions: the Americas, EMEA and APAC. With offices and partners in more than 80 countries, our customers know that wherever in the world they may be, we can deliver precise and fully tailored services without delay. All ASG EMEA partners are members of our online professional community where they can apply for training, ask questions, find knowledge and discuss the latest product ideas and improvements. Together they provide an exceptional customer experience at all times.

Innovations

Breakthrough technology is in our DNA and ASG EMEA's highly skilled engineers are responsible for translating tomorrow's technology into the ultimate performance today. Throughout the company, we embrace state-of-the-art technology to stay ahead of the curve. Employees are continuously looking for better ways to design, develop, test and improve new and existing products as well as ship them faster, offer better support and help our customers find the perfect solution.

System Solutions

Whatever the industry or application, ASG EMEA is power solution focused, offering components that are designed to easily integrate into comprehensive systems. The broad portfolio of market leading brands in power management, digital control and monitoring, electrical components, networking devices and water systems are at the touch of a finger. ASG EMEA provides the flexibility and customisable systems you desire for your applications.

Integration

Success is achieved by cooperation. Systems are getting more complex every day, customer demand is increasing and (CAN) communication makes virtually all kinds of integration possible. As well as making these systems available, fully integrated and comprehensible, cooperating with partners allows us to help you get the most from your business opportunities. Together we can deliver a fully integrated system that works well and has all the relevant components.

Premium Brands

With the world's leading brands in marine, RV, and Speciality Vehicle industries under one roof we can offer a full range of products that fulfil every need. ASG EMEA is constantly extending its offering by adding products that enable customers to build complete(r) systems and have these products available via one source. The onestop-shop principle gives easy access to all our brands.

Customer Focus

A globally oriented customer focus is an important pillar of ASG's activities. So too is our commitment to responding to new market developments as it determines which markets we serve and how we position our company and products. We remind clients that they are investing in high-quality technology, advanced systems and superior support and service. ASG is always working to expand its global A-brand reputation while using the solid knowledge of our markets and customers gained by research and analysis to lead us forward.

Providing more than products. Providing solutions.

For decades Ancor, Attwood, BEP, Blue Sea Systems, CZone, Garelick, Lenco, Marinco, Mastervolt, MotorGuide, ProMariner, RELiON and Whale have worked independently to provide innovative electrical products. Now the thirteen companies are working together to offer comprehensive electrical solutions for marine and mobile applications.

For 40 years, Ancor has been the industry leader for quality tinned copper Marine Grade™ wire and cable. Ancor's comprehensive product line includes wires and cables, terminals and connectors, wire management products, and hand tools. Ancor designs products to the highest standards that meet UL, ABYC, NMMA and USCG standards.

Attwood has been a proven marine industry leader for over 100 years. Our wide range of products, including general marine accessories, seat & table hardware, and water systems & ventilation are tested to the highest USCG, ABYC, and CE standards. At Attwood, quality is our highest priority.

attwoodmarine.com

BEP offers a range of high quality electrical solutions designed for the harsh marine and RV environments. Every product meets exacting performance specifications and is designed to withstand extreme conditions. BEP's innovative culture and engineering excellence is focused on simplifying the installation and optimizing the user experience with thoroughly tested products that will thrive in any harsh environment.

bepmarine.com

Blue Sea Systems was founded in 1992 based on a commitment to create innovative, high quality electrical products to improve the safety, simplicity, and reliability of boating. Since that time the range of product has expanded to over 1,000 items and distributed to customers in over 50 countries to Marine, Industrial, RV and Specialty Vehicles markets. Products include battery chargers, battery switches, automatic charging relays, fuse blocks, busbars, meters, and both standard and custom power distribution panels.

bluesea.com

Mastervolt's parent company, Advanced Systems Group by Brunswick, aims to offer you a continuously growing portfolio of powerful brands. We are therefore constantly looking for new companies to strengthen our market position, and increase our range of electrical components and power management systems. If you are interested in our brands and latest acquisitions, go to mastervolt.com/our-brands. You can also browse or download the catalogues of the various brands via this link.

For over 10 years, industry leading digital control and monitoring technology from CZone has revolutionized the control and management of electrical systems in both the recreational and light commercial vessel industries, and become established in recreational, specialty and emergency vehicle markets across the globe. CZone provides complete control and monitoring of all electrical circuits through dedicated touch screen interfaces, integrated marie navigation displays, wirelessly via iPad or key fob remote, or remotely via telematics integration.

Garelick produces the highest quality and most innovative metal fabricated products in the recreational marine industry. Garelick products are original equipment on some of the best boats built and within the best marine stores.

Lenco Marine is the true industry leader in the marine and boating world – manufacturing not only trim tabs but also electric actuators, hatch lifts, switches and the all new Auto Glide boat leveling system. Having expertise in electric technology Lenco Marine engineers and manufactures all of its products to make your boating fun, safe and trouble-free since 1986. Our dedication to quality and attention to detail give every member of the Lenco team the confidence to say, "We make the best boats better!"

Since 1972, Marinco power inlets and cords have set the industry standard. They are built to withstand the harshest marine environments. Marinco has continued to expand their product line to offer a complete range of shore power cords from 16 to 100 amps, as well as a broad range of cord adapters. Marinco is also a leading supplier of wipers, spotlights and horns to the marine industry.

MASTERVOLT

Mastervolt has been a strong, innovation-driven company since its founding in 1991. This capacity to innovate is what truly sets Mastervolt apart. The added value is to offer products, technologies and systems of the highest quality coupled with superior global service. Mastervolt stands for reliable autonomous power solutions. Mastervolt's electric solutions are widely used in demanding markets such as marine, mobile, off shore, industrial, autonomous solar and infrastructure.

mastervolt.com

MotorGuide®

MotorGuide trolling motors are built to live up to the willful determination of the fisherman, through purpose-driven design, intentional features, and reliability that keeps fishermen on the water longer.

motorguide.com

ProMariner[™]

ProMariner™ was founded 40 years ago with one promise: to make boating more enjoyable. ProMariner pioneered a complete line of fully automatic onboard marine battery chargers, and continues to bring innovation to marine battery chargers today. ProMariner offers performance based solutions to all boats whether it's open water cruising, sailing, or fishing, recreational boating. The passion and dedication to quality is what has made ProMariner the market leader in onboard marine battery chargers.

promariner.com

RELiON is a leading manufacturer in lithium Ion batteries,
Powering a range of applications including, recreational vehicles,
marine, solar powered solutions in the US. Our mission is to
power the world's transition to lithium energy storage, ethically.
We help customers challenge and overcome their limits, by
offering a range of high-quality products that continue to pave
the way forward to a greener and more efficient future for
energy storage. We're dedicated to giving back by donating one
percent of annual revenue to environmental causes through
our 1% for the Planet membership.

relionbattery.com

SWhale

Whale® supplies the marine, and RV industries with ground-breaking pump and water systems through high-quality design and innovation. Our forward-thinking approach is driven by a passion to deliver the best possible product and service.

whalepumps.com

Get all the comforts of home with the most innovative battery chargers and inverters

Mastervolt's battery chargers and inverters are advanced, reliable and of excellent quality. Whether you wish to use a microwave, charge your bow truster battery or use an entertainment system, Mastervolt equipment ensures you all the comforts of home.

BATTERY CHARGERS

Mastervolt battery chargers offer your batteries the optimum charge for a longer lifespan. They combine multiple functions in one device and charge batteries safely and fully, even when completely depleted.

16 MASS

Robust battery charger with integrated alarm functions and comprehensive certification. The best choice for professional and demanding applications.

RECOMMENDED FOR:

20 CHARGEMASTER PLUS CHARGEMASTER

The ChargeMaster Plus charges nearly every combination of batteries in a fast and safe way, combining auxiliary chargers, a battery isolator and VSR in a compact CZone compatible device.

The capable and compact ChargeMaster series is suitable for semi-professional and recreational use.

26 EASYCHARGE

An entry-level model including the proven Mastervolt 3-step+ charge characteristic. A waterproof and robust battery charger, also available in a portable version.

30 MASS SINE ULTRA MASS SINE

Mastervolt offers a complete range

of pure sine wave inverters from

300 watts to 40 kilowatts, for professional and recreational use.

The Mass Sine Ultra, suitable for parallel and 3-phase configuration, is ideal for large installations.

The Mass Sine is designed for continuous use in the most extreme conditions.

34 AC MASTER

Pure sine wave inverter with an excellent price/ quality ratio for recreational and semi-professional applications.

RECOMMENDED FOR:

RECOMMENDED FOR:

RECOMMENDED FOR:

RECOMMENDED FOR:

Charge & Convert

INVERTER / CHARGER COMBINATIONS

Mastervolt inverter/chargers integrate a powerful battery charger, an efficient inverter and a versatile transfer system in one robust, lightweight and compact device.

44 MASS COMBIULTRA **MASS COMBI PRO**

The Mass Combi Ultra and Mass Combi Pro are available up to 3500 watts. Parallel or threephase configuration enables capacities up to 35 kW. The Ultra model has a solar input and a secondary battery charger. Both models suit professional applications.

The CombiMaster series is designed and built with a high power rating and > 200 % peak power that can start the most complex loads with ease. Completed with MasterBus, CZone and NMEA 2000 compatible communication, the CombiMaster allows a broad range of monitoring

The versatile Mastervolt DC to DC converters ensure all your equipment has a stable power feed with the right current.

48 COMBIMASTER

and system integration options.

56 MAC PLUS **MAGIC**

The perfect choice for professional use, with low conversion losses, battery charger and dimming function.

The Mac Plus is also ideal for applications with Euro 5 or Euro 6 compliant engine. Can be connected in parallel for demanding applications.

60 DC MASTER

Converters with an excellent price/quality ratio, easy to install and suitable for recreational and semiprofessional applications.

RECOMMENDED FOR:

RECOMMENDED FOR:

Mastervolt Battery Chargers: A long life for your battery

We know how important it is to charge your batteries safely, reliably and quickly, even if the power supply is affected by low quality or limited availability. You also value batteries that have a long lifespan while maintaining their capacity. Mastervolt offers you the best possible solution.

The Mastervolt 3-step+ charging method ensures more power and a longer life for your batteries. Our battery chargers integrate multiple functions making sure your batteries are safely and completely charged, even when they are depleted. Fast battery charging is guaranteed by the efficient use of the available grid or generator power (all Mastervolt battery chargers have a power factor correction).

Which Mastervolt battery charger best meets your needs?

Mastervolt offers four ranges of battery chargers:

Mass series

For the tougher tasks in professional and semiprofessional situations. With its integrated alarm functions and various approvals, the Mass is the best choice for professionals.

ChargeMaster Plus series

The ChargeMaster series is suitable for recreational and semi-professional use. It is easy to install and has an easy to understand LED interface. The ChargeMaster can safely charge multiple battery banks at the same time in any region throughout the world.

The ChargeMaster Plus is a new generation of battery chargers that will replace the ChargeMaster in stages. The ChargeMaster Plus combines up to three battery chargers, a battery isolator and VSR in one compact device. This all-in-one solution can charge all batteries, even when you're on the go. These chargers are CZone compatible.

■ EasyCharge series

Entry level model with proven Mastervolt 3-step+ charge characteristic, in a waterproof epoxy-filled, non-corrosive enclosure.

■ EasyCharge Portable series

For people on the move, the portable version offers a rugged solution that can be used everywhere.

MASS
CHARGEMASTER PLUS
CHARGEMASTER
EASYCHARGE
EASYCHARGE PORTABLE

The best battery charger for every application

The ChargeMaster series can charge multiple battery banks at once. The Mass battery charger has one main outlet to optimally charge a battery bank. Both guarantee a long lifespan for your batteries, even with daily and intensive use. ChargeMaster Plus can smoothly charge a combination of multiple battery types, sizes and voltages. The intelligent built-in auxiliary power means that all Mastervolt battery chargers can also charge a completely discharged battery (< 8 V).

Charging Lithium Ion batteries

Mastervolt battery chargers can seamlessly charge Lithium Ion batteries as the Mastervolt battery chargers communicate directly with the Lithium Ion battery via the integrated MasterBus and CZone protocols (or have been adapted to the required charging voltages).

Approvals/Certifications

All Mastervolt products comply with one or more of these approvals (see relevant product specifications for details). If the required certification is not present, ask your account manager for an addition.

MASTER TIP

Choosing the right battery charger

Determine:

- How many battery banks do I want to charge?
- The battery charger must have the same voltage as the battery bank.
- Rule of thumb is that 25 % of the battery capacity as a charge capacity is sufficient to safely and quickly charge batteries while still supplying power to the consumers (for instance, a 50-amp battery charger is sufficient for a 200 Ah battery). Increase up to 50 % for Mastervolt Gel batteries and 100 % for Mastervolt Lithium Ion batteries for faster charging.

Mass Series:

The right choice for demanding conditions

Mass battery chargers are designed for the toughest conditions for professional, semi-professional and recreational purposes. Even under the most extreme conditions the products from the Mass series operate faultlessly, giving you round-the-clock output when necessary.

The sustainability and technologies that underpin the Mass concept have long been proven in practice. With an MTBF of 180,000 hours at full capacity and 24/7 use, the Mass products are ideal for the toughest tasks and any situation that requires a reliable power supply.

FEATURES

- Designed for the most difficult conditions.
- Robust, stainless steel, anodised aluminium casing.
- Coating of internal components prevents damage from damp or condensation to ensure a longer lifespan.
- Insensitive to electromagnetic effects from other devices.
- Suitable for every type of battery, also charges flat batteries.
- Delivered as standard with temperature sensor.
- Full power at temperatures of up to 40°C.
- Battery capacities from 30 to 1000 Ah or more.
- Stable and ripple free 24 and 48 V power supply, even without batteries.
- The Current Control function prevents the breakdown of fuses when the AC voltage drops.
- Parallel switching possible using multiple battery chargers.
- Connections in accordance with CE, ABYC A-31 and IEC60945.
- GMDSS models and panels available.
- Certified by RRR, RMRS (does not apply to Mass 24/75 120 V).
- Certified by DNV GL (only 24/25, 24/50, 24/75, 24/75 (120 V) and 24/100 models).

MasterBus Compatible

Mastervolt battery chargers can be easily connected to a MasterBus network with only one cable and one connection. You can also choose central, local or remote monitoring, configuration and control of your system.

Made tough by smart design

The certified Mass battery chargers are very strong, designed to withstand heavy vibrations and shocks. The premium quality components are designed to the highest specifications, while the smart and extra robust mounting adds to the professional end result.

The Mass series are designed for the most demanding situations. To help you comply with SOLAS regulation, all Mass battery chargers are GMDSS compatible. GMDSS stands for Global Maritime Distress and Safety System, and allows users to monitor various alarm functions. GMDSS versions of the Mass 24/25 DNV, Mass 24/50, Mass 24/75, Mass 24/100 and Mass 24/100-3ph are available.

A separate remote panel is available, which is compatible with all Mass battery chargers - *product code 70400050*.

A single front display with GMDSS remote panel is available for:

- Mass 24/25-2 DNV; product code 21709150
- Mass 24/50-2; *product code 21709200*
- Mass 24/75, Mass 24/100, Mass 24/100-3ph; product code 21709300

ChargeMaster Plus Series:

All-in-one solution for faster and safer charging

ChargeMaster Plus is the next generation of battery chargers that integrates multiple functions into one single device. Replacing auxiliary chargers, ChargeMaster Plus reduces system complexity and cost. Designed for versatility, it charges virtually any combination of two or three batteries in a fast and safe way and works anywhere in the world.

The 'Battery's Best Friend' architecture enables the ChargeMaster Plus to charge any battery chemistry using the fast and safe 3-step+ charging method. Different battery sizes can be combined, as the

pre-float functionality eliminates the risk of overcharging smaller batteries. Other unique features are:

- Revival mode: automatically revives even fully depleted batteries.
- Multi voltage: charge 12 V (starter) battery in a 24 V system, without additional components (24 V models only).
- Priority Charge: redirect available power to the lowest battery, for faster charging.
- Smart Input: charge all three batteries from one single alternator for continuous charging on the go. (on selected models only)

Global Charging

The ChargeMaster Plus handles worldwide AC voltages and frequencies. Resisting large voltage fluctuations and high temperatures, it keeps

working in harsh environments. For marine and mobile markets, the ChargeMaster Plus is CE, ABYC, UL, SAE, CEC/DOE and RCM/C-Tick compliant.

System Simplicity

Nowadays, equipment must be selfexplaining. The ChargeMaster Plus displays the charge phase of all outputs

in an understandable way. Robust and ergonomic connections save installation time. On specific models an integrated VSR eliminates the need for additional components and ensures that the alternators energy is funnelled through to the batteries.

FEATURES

- Multicharger with up to three outputs, including current limiter and VSR (on specific models).
- Connect the alternator to the smart in/output and charge all three batteries (on selected models only).
- On 24V models, due to the build in DC-DC converter, there is the possibility to charge a 12V battery of a different chemistry then the main outputs.
- Combine different sized batteries, and charge them quickly but without the risk of overcharging.
- Charges multiple batteries while being underway. (On selected models only).
- Extended specifications: offers 20 % more output at 14.4 V and 80 % charging power at 60 °C.
- Very wide operating range of 80-275 V AC, 35-70 Hz.
- Compact, easy to connect and quick to install.

Powerful Communications thanks to CZone integration

In modern applications, all electrical components work together. The CAN-based MasterBus enables the ChargeMaster Plus to communicate with displays, shunts and power systems including communication standards like CZone®, NMEA 2000 and CANopen (through additional interfaces).

All ChargeMaster Plus models can achieve full functionality within a complete MasterBus, CZone or NMEA2000 system without the need of additional interfaces. Other communication standards like ModBus, CANopen, LinBus, etc. are supported via additional interfaces.

In addition, the ChargeMaster Plus is a convenient plug-andplay standalone battery charger. It can operate as a power supply for delicate communication equipment, or during the construction phase of a boat.

ProMariner™

PROMARINER.COM

EasyCharge: Waterproof fixed-mount battery chargers

The fixed-mount, waterproof units are fully sealed in an epoxy-filled, non-corrosive enclosure, and built to IP68 waterproofing standards, easily meeting global regulations like CE, CSA, CEC, and ABYC. The outputs are completely isolated, and can be used in either series or parallel for higher voltage or current, including 12 or 24 V outputs.

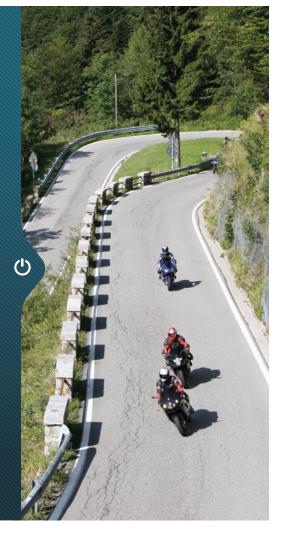

Highly efficient and simple to use, these chargers are designed for harsh environments, and are fully salt, shock and vibration tested. Currently, 6 A single bank and 10 A dual bank types models are available.

A key feature is the 'sense and send' technology, which allows the chargers to detect which batteries need the most charge and prioritise accordingly. The battery chargers have the ability to charge wet, AGM and Gel batteries, with a universal input (120-230 V) for total worldwide freedom.

FEATURES

- Entry level model with Mastervolt 3-step+ charge characteristic.
- Suitable for charging Gel, AGM and flooded batteries.
- Full power up to 40 °C.
- Quick charging function to extend battery life.
- Includes cable & Euro plug.
- Can charge one or two battery banks.
- Sense-Send[™] (10 A model): determines which battery is being charged first.
- Series and parallel configuration.
- Stain resistant and waterproof.
- International certification.

EasyCharge Portable:

Waterproof portable battery chargers

For people on the move, the EasyCharge portable battery charger offers a reliable solution that can be used on the boat, car, motorcycle, and camper van. With a rugged, ergonomic construction, and waterproof to IP65 standard, the portable chargers have an intuitive control panel and a universal input (120-230 V) for total worldwide freedom.

Users can quickly select between 6 V (ideal for toys, classic cars and motorcycles) and 12 V operation. The units include 1.8 m of DC cable that connects to either a 61 cm lead with ring terminals, or a 61 cm lead with alligator clips, for easy installation and a variety of applications; both leads are included in the package.

FEATURES

- Entry level model with Mastervolt
 3-step+ charge characteristic.
- Suitable for any type of battery, including Lithium Ion.
- Full power up to 40 °C.
- Includes cable & Euro plug.
- Simple switching between 6 V and 12 V.
- Portable and waterproof.
- Easy to connect through ring terminals, or alligator clips (included).

Mastervolt Sine Wave Inverters: Enjoy the comforts of home

Your AC installation offers you a wealth of benefits by making the use of any domestic appliance possible, from microwave oven to hairdryer, DVD player to power tools. A Mastervolt inverter allows you to easily convert the voltage of your 12 V or 24 V battery to 230V/50Hz or 120V/60Hz, so you enjoy all the comforts of home wherever you choose to go.

Mastervolt offers a complete range of inverters from 300 watt to 40 kwatt, for 230V/50Hz as well as 120V/60Hz.

Completely independent

Grid power regularly fluctuates and can cause your lights to flicker. Sometimes it may even drop below 180 volt, causing some devices to stop functioning. The Mastervolt sine wave inverter ensures a perfect AC voltage, and makes power problems a thing of the past. The pure sine wave technology also helps protect your equipment against failures, humming or interference on monitors or TV's and ensures a longer lifespan.

Which Mastervolt sine wave inverter fits your needs?

■ Mass Sine Ultra

This model is intended for professional applications with high power demands, and extends the Mass Sine series. With 4 kW AC power, the Mass Sine Ultra meets the highest energy requirements. The latest technology increases the efficiency and enables multiple units to work in parallel and 3-phase configuration up to 40kW.

Mass Sine

These high quality sine wave inverters have proven themselves in the most extreme conditions for over twenty-five years. Although the dimensions and connections of the various models have remained the same, the technology has evolved, resulting in a fast, efficient, one-on-one replacement with minimal downtime.

AC Master

These affordable sine wave inverters convert 12 or 24 V battery voltage into reliable grid power, making it ideal for recreational and semiprofessional applications

Our use of high-frequency switch technology means you can say goodbye to humming transformers and hello to efficiency. Mastervolt inverters are also small and lightweight to ensure easy installation.

A high efficiency when inverting and an automatic economy mode when there is no consumption gives you longer use of your batteries.

High peak power during start up

Mastervolt sine wave inverters can deliver high peak power (up to 200 %) to equipment that requires extra current for a short period of time while powering up.

Pure Sine Wave

Mastervolt inverters generate a sine wave shaped output current similar or even better than that of the public grid and perfectly suited for powering sensitive equipment.

Simple and safe to connect

The inverters feature robust connection technology, internal in the larger models and a plug & play socket with cable for the smaller models.

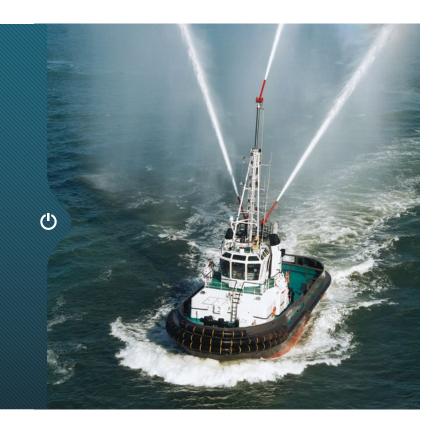

Every Mass Sine (Ultra) inverter can be easily connected to a MasterBus network with only one cable and one connection. You can also choose central, local or remote monitoring, configuration and control of your system.

Mass Sine Ultra and Mass Sine: For the toughest tasks

Even under the most extreme conditions the products from the Mass series operate faultlessly, giving you round-the-clock output when necessary. With an MTBF of 180,000 hours at full capacity and 24/7 use, the Mass products are ideal for the toughest tasks and any situation that requires a reliable power supply.

Choosing a Mastervolt inverter is simple, determine you power needs, you application and choose the perfect fit from a wide range of models

High Efficiency

The high efficiency and automatic economy mode are designed to

allow ac loads to work properly and ensure you many more hours of operation from your batteries. The application of high-frequency technology prevents any annoying humming and zooming sounds, while the high peak capacity ensures that the high inrush current required for electrical tools, for example, is seamlessly produced.

FEATURES

- For heavy duty work in professional and semiprofessional applications.
- Full capacity at temperatures up to 40 °C.
- Pure sine wave output prevents failures and damage to connected sensitive equipment.
- High peak capacity for the seamless switching on of complex and heavy loads.
- Dynamic, battery-specific input current for an optimal use of every type of battery (Mass Sine Ultra).
- Parallel configuration of up to ten devices for a capacity up to 40 kW (Mass Sine Ultra).

- 3-Phase configuration for a capacity up to 36 kW (Mass Sine Ultra).
- Integrated MasterBus (Mass Sine Ultra) or MasterBus compatible (Mass Sine & ACmaster).
- Suitable for mobile applications.
- Professional connections.
- Automatic, reliable and safe operation.
- Optional: Masterswitch/Systemswitch for automatic selection of the desired energy source.

Mass Sine Ultra

With an AC capacity of 4000 W in one unit, the Mass Sine Ultra can satisfy even the greatest energy

demands. As ten units can be switched in parallel or 3x3 in a three phase configuration, the Mass Sine Ultra can supply a capacity of up to 40 kW. The inverter provides full power at 40 °C and works smoothly even in extreme conditions such as engine rooms and technical spaces. Like all Mass products, the inverter is supplied in a compact and robust casing. This inverter is the best choice if you are looking for autonomous AC capacity of over 3 kW.

Latest Technology

The extremely efficient power electronics save volume and

weight with minimal sound levels and a very low ripple voltage which extends the lifespan of your batteries. At the same time, digital technology prevents any annoying flickering and voltage fluctuations.

Make the most of your batteries

The Mass Sine Ultra is equipped with a dynamic battery voltage window.

Taking into account the type of battery and current, this function ensures the inverter can supply AC longer without overtaxing the batteries.

Mass Sine

Mastervolt's Mass Sine inverters have been proving their value in the most extreme conditions for over 25 years.

Clear Indicators

The Mass Sine features easy controls on the device itself. As inverters are often built in, we also supply an effective remote control panel, the C4-RI. In addition, the Mass Sine can be controlled via its intuitive display, the

EasyView 5, thanks to the integration of MasterBus communication using a Mastervolt Inverter Interface or AC Power Analyser.

Easy and safe connections

The Mass Sine inverters provide robust and professional connections for fast and safe installation.

The following model is also available in Quick Connect (OEM) version with a WAGO 770-103 connector and 25 cm cable:

■ Mass Sine 12/2000 230 V, *product code 24012002*

AC Master Series:

Reliable AC power for recreational and semi-professional use

These affordable sine wave inverters convert 12 or 24 V battery voltage into reliable 230 V 50/60 Hz or 120 V 50/60 Hz power, making them ideal for recreational and semi-professional applications.

The AC Master series is easy to install and delivers full output, even under the most demanding conditions. The pure sine wave technology provides an outstanding power quality, ensuring the correct functioning of sensitive equipment.

The usage of high frequency switching technology eliminates any annoying humming and buzzing sounds.

Representing complete value for money, these ruggedly built inverters provide essential home comforts when you're far from the nearest grid connection.

Applications

Both recreational and semi-professional use, where grid power varies or is unavailable. Applications include lighting, appliances, electric cooking and power tools. For (mobile) applications in your home, office or service vehicle, or during your holidays.

FEATURES

- Pure sine wave technology protects sensitive equipment.
- Delivers full output at high peak power under the most demanding conditions.
- Automatic power saving system for extended runtime.
- Compact and lightweight design, saving valuable installation time.
- Reliable and safe operation; protected against over-temperature, overload, short circuit, high or low battery voltage.
- Variable speed fan for quiet operation at low power.
- Masterbus compatible with the Masterbus AC Master interface.
- Optional remote control for instant switch off of the inverter and all connected equipment.
- Convenient plug connection for all models, 2500/3500 Watt models also hard wired.

In addition, the 2500/3500 Watt models offer:

- Combine 2 up to 15 units to obtain high power or 3-phase systems.
- Integrated transfer system, switches automatically between AC power sources.

Mastervolt Inverter/Chargers: High-quality power supply with first-class comfort, wherever you are

Mastervolt inverter/charger combinations integrate a powerful battery charger, a quiet and efficient inverter and a versatile switching system in one robust, lightweight and compact device. This multifaceted product offers a carefree power supply for recreational and professional use.

Possible applications vary from launches to 16-metre yachts, from campers to demo trucks, from holiday homes to remote businesses, and from backup systems to grid connected systems with energy storage. Each CombiMaster, Mass Combi Ultra and Mass Combi Pro can be used as an automatic stand-alone device for a non-stop power supply or as part of a larger power system.

NMEA 2000 W SYSTEM COMMUNICATION

MasterBus/CZone Compatible

The endless MasterBus configuration possibilities are ideal for advanced system integration. The MasterBus interface allows direct modification of

system parameters with immediate result. For applications that require duplication (series build of systems) CZone communication is ideally suited. You simply design the configuration file and duplicate this to all systems with one click.

MASTERVOLT.COM/TECHNICALBACKGROUND

Which Mastervolt inverter/charger suits you?

■ CombiMaster

This latest Mastervolt innovation delivers unmatched performance at an unprecedented price, and offers the best of both worlds: an advanced battery charger and a quiet inverter combined in one compact device. The CombiMaster is easy to install without expert know-how thanks to plug & play capability. Compatible for communication with MasterBus, CZone and NMEA 2000, the CombiMaster ranges from 1600 to 2600 watt. Suitable for recreational and semi-professional use.

■ Mass Combi Ultra

The Mass Combi Ultra is more compact, stronger and more efficient. In addition to easy installation and higher capacities, the Combi Ultra has various unique benefits such as full capacity in high temperatures, an integrated solar charge regulator, and separate grid power and generator inputs. Up to ten units can be parallel switched plus a 3-phase power supply. Available for systems ranging from 3,000 watt to 40 kW, designed for professional and semi-professional use.

■ Mass Combi Pro

The Mass Combi Pro is the perfect solution for professional applications. This version has all the Mass Combi Ultra features but without solar input and secondary charger. The Pro provides the optimal balance of strength, versatility and cost.

If you require more power than the grid or generator can provide, the Mastervolt Combi series will make up the shortfall by inverting from the battery. The combi also ensures that the battery is recharged once the peak demand has passed.

Ease of installation

The integrated design of three devices into one, lightweight body and robust mounting clamps give considerable savings in (labour) time and costs.

Exceptional Performance

The inverter is quiet, clean and efficient, and offers the full capacity even in extreme ambient temperatures. Pure sine wave energy and a peak capacity of 200 % guarantee a problem-free start, even for the heaviest loads.

The built-in battery charger uses Mastervolt's proven 3-step+ charging technology to allow the optimal charging of all battery types, including our advanced Lithium Ion models. The battery charger supplies a maximum charge current, even with a higher temperature, and speeds up the complete recharging of your batteries.

Mass Combi Ultra & Mass Combi Pro:

Powerful, complete and versatile

The Mass Combi Ultra series comprises several models, varying from 3000 W to 3500 W. For higher capacities up to 35 kW the Combi Ultra can be used in parallel or 3-phase configurations. An efficient and integrated solar charge regulator helps make the most of your solar panels.

The Mass Combi Ultra is equipped with the latest technologies. The new inverter technology ensures a uniquely low stand-by use, while an ultra-fast Digital Signal Processor guarantees seamless switching between all available energy sources. *Power Assist* prevents power dips and failures, even with a weak electricity connection or small generator. Moreover, all Mass Combi Ultra models are equipped with MasterBus.

Higher yield from solar energy

At Mastervolt we used our knowledge gained in the grid connected solar sector to make a super-efficient built-in MPPT solar charge regulator.

Compared to most solar charge regulators on the market, the MPPT offers up to 30 % more yield from solar panels. The solar panels power 'hidden' consumers and keep your batteries in optimal condition.

'Pro' Models

For professional applications. Mastervolt offers a 'Pro' model, featuring all Ultra functions, but without the solar input and secondary battery charger.

- Quiet, powerful inverter with 200 % peak power.
- Compact, lightweight and hum-free thanks to HF technology.
- Pure sine wave voltage prevents malfunctions and damage to sensitive equipment such as adapters.
- High yield and more power from your batteries.
- Intelligent 3-step+ battery charger with low DC ripple current for fast charging times and long battery life.
- Power Assist: prevents blown fuses.
- A dynamic battery voltage window allows you to enjoy AC power for longer without damaging your batteries.
- Active Optima Cooling concept prevents unnecessary fan noise.
- Charges two individual battery banks simultaneously (Mass Combi Ultra).
- An integrated MPPT solar charge controller allows for 30 % more yield from solar power for charging the batteries (Mass Combi Ultra).
- Quick installation and reliable professional connections.
- CE and ABYC certified.

The Mass Combi Ultra and Mass Combi Pro can provide up to 50 % of the charging current or inverter capacity without fan cooling. This is perfect for night-time operation; if little power

is consumed, the fan stops turning and goes silent. When maximum capacity is required, or the ambient temperature is very high, the Active Optima Cooling concept regulates the fan speed in a linear way, ensuring that it never spins too fast or makes any unnecessary ticking noises.

Parallel and 3-phase operation

The Mass Combi Ultra and Mass Combi Pro functionality goes beyond stand-alone operation, the

design also allows parallel and 3-phase configurations for larger applications up to 35 kW. For larger systems, an external transfer system is required.

Dual AC inputs and outputs

The Mass Combi Ultra and Mass Combi Pro have inputs for generator or mains supply, each optimized for the power source. A robust intelligent transfer system switches seamlessly between AC power, generator and inverter, and ensures a constant power supply. Flickering lights or failure of electronic equipment belong to the past. Separate AC outputs provide the ability to power heavy users via mains and/or generator.

CombiMaster series: Unmatched performance at an unprecedented price

Designed with the customer in mind and using the latest technology, the CombiMaster inverter / charger is all about user-friendliness and reliability. But don't let that friendly appearance misguide you: the powerful CombiMaster range drives even the heaviest and most sensitive loads with ease!

With the CombiMaster, power dips and failures belong to the past. The automatic AC transfer system switches between generator or mains and inverter output, ensuring a constant power supply. Its Power Assist function prevents tripping of the mains fuse in case you're connected to a weak land line or small generator.

The CombiMaster range delivers unmatched performance and value for money. As you would expect from Mastervolt, the CombiMaster is completed with MasterBus, CZone/NMEA2000 compatible communication, allowing for a broad range of monitoring and system integration options.

Remote Control and Monitoring options

- MasterBus compatible via SmartRemote or EasyView 5 display.
- CZone / NMEA 2000 compatible via Touch 5, Touch 7 or Touch 10 display.
- NMEA 2000 compatible via 3rd party multifunctional display.

FEATURES

- Most compact and lightweight Combi in its class.
- Reliable, hum-free and longer operation from your batteries.
- Starts even the heaviest and most sensitive loads.
- Intelligent 3-step+ battery charger for faster and safer charging.
- Automatic switching between mains and inverter mode.
- Power Assist prevents blown mains fuses.
- Generator compatible.
- Integrated CZone, MasterBus and NMEA 2000 communication.
- Quick installation with heavy duty connections.
- E-mark certified.

Mastervolt DC-DC Converters: For 12, 24 and 48 volt

A DC-DC converter can provide other voltages than those applied in your basic system. By using a DC-DC converter, other voltages can be reached. They also ensure that all your equipment has a stable power supply with the right voltage.

Mac Plus & Magic Series

- Professional use.
- Converter and 3-step battery charger.
- Parallel switchable.
- Adjustable and programmable output voltage.
- Voltage stabilisation for a longer lifespan of halogen lights, etc.
- Dimmer function for Magic models.
- Mac Plus: optimal charging in Euro 5/6 applications.

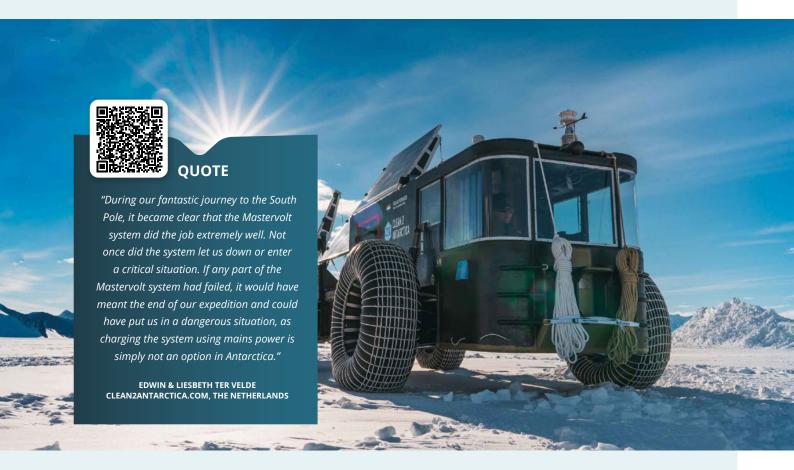

The *Magic* models can regulate the voltage both up and down to ensure an optimal voltage stabilisation, even when the battery voltage fluctuates due to heavy loads. The galvanic isolation between input and output prevents disruptions to, for instance, communication equipment.

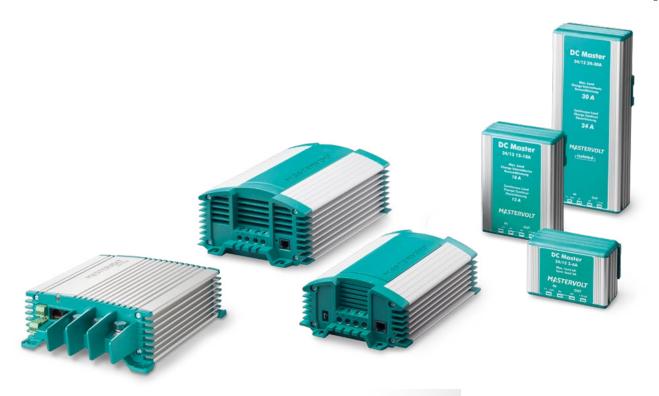

The *Mac Plus* is ideal for charging service batteries in vehicles with a smart Euro 5/6 alternator.

The Mac Plus charges the batteries quickly, even when the alternator is inactive and the battery voltage very low. The automatic start/stop function ensures that empty starter batteries become a thing of the past. The Mac Plus comes with integrated MasterBus (CAN) communication and E-mark certification. It seamlessly charges Lithium lon, Gel and AGM batteries via the tried and tested Mastervolt 3-stage charging method.

DC Master Series

- Recreational and semi-professional use.
- Easy to install using included mounting bracket.
- Excellent price/performance ratio.
- Available in isolated and non-isolated version.

Solid Connections

Galvanized brass connection block with screw terminal or chrome-plated fast-on for DC in/out for the Magic models. The robust M8 connections of the Mac Plus prevent any loosening due to vibrations.

3-Step battery charger

Connected to the 12 or 24 V service battery, the Magic/MACplus series can also be used as an advanced 3-step battery charger for Gel, AGM, flooded or Lithium Ion batteries.

Euro 5/6 solution

Charging service batteries in Euro 5/6 applications? The Mac Plus provides constant power to the service battery, even when the alternator is inactive.

Parallel Operation

Lots of consumers on board? The parallel configuration of several units will provide you over 100 amperes. Advanced high-frequency technology with modern microprocessors ensures minimum power loss when switching from 24 to 12 V and vice versa.

Many standard light dimmers convert part of the energy to heat and also lose unnecessary energy. The Mastervolt Magic converters regulate the power supply efficiently and without excessive heat build-up, for optimal safety (multiple converters can be used for multiple lamps).

Programmable

Standard settings can be made with dipswitches for most applications. For special needs you can always use our MasterAdjust software.

Mac Plus series: Boost the charging voltage of your service battery!

Charging the service batteries on board of a vehicle or vessel can be challenging. Recharging tends to take a long time and batteries may not receive a full charge. This is a common problem found in boats, service vans, campers and trucks. Smart alternators and start/stop systems make the problem even worse.

Robust DC-DC charger guarantees optimal condition of your service battery

Traditionally, a service battery is linked to the starter battery by means of a charge relay. The starter battery is located close to the alternator and receives most of the charge current. However, the service battery is usually further away. Long cables cause voltage drop, leading to slow charging, resulting in failing appliances and premature failure of the battery.

Modern, fuel efficient engines are equipped with smart alternators, following regulations such as Euro 5 and Euro 6. Instead of a constant output, smart alternators provide a variable voltage; after a brief charging period, voltage is reduced and the charging stops. Furthermore, the energy produced by regenerative braking leads to voltage peaks. Service batteries coupled in the traditional way will receive hardly any charge and may be damaged by these peak voltages.

To solve these issues, Mastervolt introduces the Mac Plus DC-DC chargers, available in 12 V or 24 V. The Mac Plus monitors the service battery and compensates the voltage loss. The proven 3-step charge method ensures a quick and safe charge. Moreover, by stabilizing the charge voltage, Mac Plus protects your service battery and sensitive equipment.

Applications

Boost charge voltage when service battery is located further from charging source or in systems with a smart alternator. When a stable power supply or different system voltage is needed.

FEATURES

- Fast and safe charging during short trips.
- Fanless design for silent operation.
- Suitable for flooded, Gel, AGM and Li-Ion batteries (incl. LiFePO4).
- Charges even fully depleted batteries.
- Engine run detection protects starter
- Adjustable current limits to meet Euro 5/6 requirements.
- Voltage stabilisation protects sensitive equipment, lights and loads.
- Parallel operation to obtain charging capacities well over 100 Amps.
- MasterBus for intelligent system monitoring and automation.
- Temperature compensation and voltage sense for an optimal charging result.
- E-mark certification for mobile applications.
- Power supply mode.
- Heavy duty connections for easy installation and quick set up via DIP switches.

Battery's Best Friend

The Mac Plus is your battery's best friend. It monitors your service battery and makes sure it's always fully charged, maximising the lifetime of your battery.

Parallel operation

The parallel configuration of several units will provide you over 100 amperes. Advanced high-frequency technology with modern microprocessors ensures minimum power loss when switching from 24 to 12 V and vice versa.

ISOLATED OR NON-ISOLATED?

The non-isolated Mac (Plus) and DC Master models have an electrical connection between the input and output. Features:

- Low costs.
- Efficient: low heat generation.
- Compact.
- Suited to applications with negative earthing.

The isolated Magic and DC Master models provide galvanic isolation between input and output circuits. Features:

- Extra touch-proof.
- Interference suppression for sensitive equipment.
- Available with negative or positive grounding.

Magic as power supply

The Magic models can be fully used as a stabilised power supply: From 12 to 24 V, from 24 to 12 V or from 24 to 24 V. Inputs and outputs are galvanically isolated. Ideal for sensitive (radio) equipment.

Non-isolated

All DC Master converters come with a mounting bracket, screws and fast-ons.

Smart solutions for energy storage

Mastervolt provides autonomous energy supply for vehicles, boats and homes which are sometimes disconnected from the grid for long periods. Powerful and reliable batteries are the solution: Mastervolt provides several battery technologies designed for optimal performance, reliability and a long service life even in harsh environments.

LITHIUM ION

Lithium Ion batteries ensure fast, safe and efficient use, an extremely long lifespan and 70 % savings on volume and weight. All Mastervolt Lithium Ion batteries use the extremely safe LiFePO4 chemistry.

66 MLI Ultra

Top quality Lithium Ion batteries. High capacity and specifically developed for extremely short charging cycles. Equipped with various functions such as an integrated Battery Management System and MasterBus / CAN and CZone / NMEA 2000

GEL

In these batteries, the electrolyte is absorbed by a gel. Gel batteries are entirely maintenance-free and because they do not produce gas when used in a normal way, can be placed anywhere.

70 MVG

Ideal as service battery and cyclical use. For medium to large 12 and 24 V systems with a high number of charging and discharging cycles. Charges very quickly.

70 MVSV 2 V

Robust Gel batteries designed for large systems and intensive use. Charge quickly and are extremely durable. Suitable for horizontal and vertical placement and problem-free deep discharge.

RECOMMENDED FOR:

RECOMMENDED FOR:

Store

AGM

AGM batteries or glass fibre batteries can be discharged quickly with very high currents, making them ideal for starter applications.

72 AGM

The excellent starter current makes this battery an ideal replacement for traditional open batteries. Also suitable for light cyclical use.

72 AGM **SLIMLINE**

Universal and very slim battery with an exceptionally small 15 % in volume and weight.

72 AGM 6 V

Alternative solution regarding placement and size for composing high capacity 12/24/48 V battery sets.

BATTERY ISOLATORS

Mastervolt offers various smart solutions for managing multiple batteries.

footprint. Saves up to

75 BATTERY MATE

Battery isolators with minimal energy loss.

76 CHARGE MATE

For connecting and/or disconnecting two batteries with optional current limiter and current priority.

Mastervolt Batteries: The right choice for energy storage

Mastervolt makes selecting the right battery simple. Whether you choose a lower MLI Ultra priced battery such as AGM or an innovative and advanced Lithium Ion battery, Mastervolt has the right battery for every application.

Mastervolt has divided its entire battery range of 36 types into seven series and four different battery technologies. Each series has its specific features.

All Mastervolt batteries offer you these advantages:

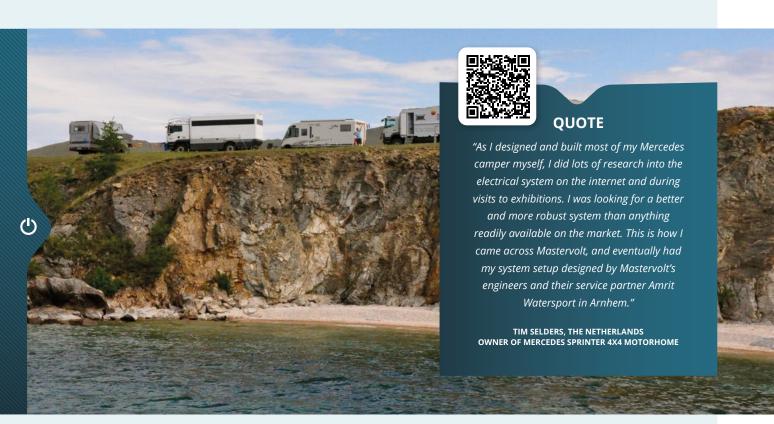

- Maintenance-free.
- Safe no gassing.
- Easy to install.
- Designed for cyclical use (charge/ discharge).
- Minimum self-discharge.
- Two year warranty.

Further information:

- Determining the correct battery capacity for your new battery/ batteries is very important. For support and more information see mastervolt.com/batteries.
- Choosing the right battery charger guarantees the maximum lifespan for your batteries. Mastervolt's modern 3-step+ charge technology charges your batteries safely and quickly. For more information see ■ mastervolt.com/chargers.

Which battery is best for your application?

adequate

★ inadequate

1 Lithium Ion Batteries

**** excellent

Lithium Ion batteries have a high energy density, offering savings of up to 70 % in volume and weight compared to traditional lead-acid batteries. They are perfect for cyclical applications, making over 3500 cycles with very deep (80 %) discharges, effectively storing 5 times as much energy over its lifespan compared to lead-acid.

The Mastervolt MLI Ultra range is top of the line. It offers large capacity batteries designed for extreme duty cycling, with all possible features such as integrated Battery Management System (BMS), MasterBus/CAN and CZone communication protocols.

2 Gel Batteries

\star very good

In Gel batteries, the electrolyte is absorbed by a gel. This type of battery is entirely maintenance-free and has no gas formation with normal use. As no extra ventilation is required, Gel batteries can be installed anywhere. They are ideal as service battery and for cyclical use, and can be charged very quickly.

3 Traction Batteries

This robust Gel battery is designed for regular and deep discharging (> 1000 full cycles), and is ideal for large systems that require intensive use and a very long lifespan.

4 AGM Batteries

In AGM batteries, the electrolyte is largely absorbed in glass fibre. This type of battery is entirely maintenance-free and there is no gas formation with normal use. Not requiring any ventilation, these batteries can be installed almost anywhere.

Their construction gives a very fast discharge at very high currents so AGM batteries are ideal for systems that require high peak currents (for instance when starting an engine). The battery poles can be unscrewed and this type of battery can be combined with every standard battery terminal.

Lithium Ion Batteries

A few of its outstanding features

- Space and weight savings up to 70 %.
- Three times the lifespan of traditional batteries.
- Extremely fast charging and discharging.
- High efficiency: not wasting energy.
- Safe operation.
- CZone / NMEA 2000 or MasterBus / CAN communication protocols.

MASTER TIP

The term Lithium Ion encompasses multiple chemistries, having slightly different compositions of materials. These differences result in variations of energy and power density, lifespan, cost and safety. As safety is our primary concern, Mastervolt chooses to use only the safest available Lithium Ion chemistry, Lithium-iron phosphate (LiFePO4).

■ MLI Ultra

The MLI Ultra is designed to be able to enjoy all the best properties of Lithium Ion technology in the harshest conditions (such as high charge and discharge currents, wet environments, mechanical shocks or vibrations). To do this, the MLI batteries bring two things on top of Lithium-iron phosphate cells: a sturdy, waterproof housing and the best Battery Management System (BMS). The BMS ensures optimal use of each individual cell, even during fast charge and discharge, and has integrated battery monitoring to always have the best information on the state of your battery. Last but not least, it has MasterBus / CAN and CZone / NMEA 2000 communication to the Mastervolt battery charger or to any CZone / NMEA 2000 based product to ensure the best possible recharging and lifetime of the battery.

Suitable for large battery banks

The MLI Ultra series is ideal for electric and hybrid applications, and can be connected in unlimited parallel configurations. The built-in technology offers an easy series connection of multiple MLI Ultra batteries.

Safe Operation

The Mastervolt MLI series is equipped with an integrated Battery Management System (BMS) and communication through MasterBus / CAN and CZone / NMEA 2000 (available on all MLI Ultra batteries). Even in the harshest cycling conditions this guarantees efficient and safe operation of the battery.

Superior Performance

Mastervolt Lithium Ion batteries have a realistic lifespan of over 3500 cycles at a depth of discharge (DOD) of 80 %. This means five times more energy storage than lead acid batteries thanks to features such as extremely high efficiency, the almost complete absence of self discharge and the minimal build-up of the infamous 'memory effect'.

Weight Reduction

As speed and performance are crucial aspects, a Lithium Ion battery with 70 % less weight offers

considerable benefits. A vessel or vehicle with a storage capacity of 20 kWh on board, can easily save up to 500 kg and achieve a substantially better performance.

Easy Installation

The MLI series includes two integrated handles with a recess for the correct and practical installation of the cables. The battery poles are easily accessible and completely protected, so no extra isolation covers are needed.

Optimal division of charge current over multiple batteries

Onboard systems usually consist of two or more batteries that function independently when powering the 12 or 24 V consumers. These batteries require independent charging with reliable battery isolators or battery combiners.

Mastervolt offers several intelligent solutions:

- Battery isolators that divide your charge current with a minimum energy loss.
- The Charge Mate for connecting and/or disconnecting two batteries.

Complete range for every system

- **BI series** battery isolators for conventional systems with an alternator or battery charger and two or three batteries.
- Battery Mate battery isolators with a negligible voltage drop; most suitable for charging multiple batteries, possibly with various brands of alternators, even if their charge voltage cannot be adjusted. Ensures high efficiency and negligible energy loss.
- **Automatic charge relay** to charge two batteries from a single source.

Charging two or three batteries at high capacity

The Battery Mate is ideal for alternators with a maximum charge current of 160 A or 250 A. It can charge two or three batteries with a very high yield and without voltage drop.

Robust and Durable

Completely corrosion-proof material with aluminium heat sinks. The electronic components are protected against moist.

Clear Monitoring

Safety guaranteed: The Battery Mate LED display indicates whether the power input is active.

Fast Installation

The synthetic end plates feature connection lugs, the solid bolt connections with nuts and locking rings ensure easy installation.

Compact and Lightweight

The Mastervolt BI battery isolators are compact and fully solid state, preventing wear. The weight varies from 580 to 1300 grams.

BI Battery Isolators

Mastervolt's BI battery isolators are based on conventional diode technology. The diode voltage drop (ca. 0.6 V) can be compensated for by adapting the output voltage of the connected charger or alternator. Mastervolt Mass battery chargers and Alpha Pro charge regulators are standardly equipped with automatic voltage drop compensation.

Battery Mate

While BI battery isolators are conventional diode splitters, the Battery Mate's technology is electronic and includes mosfets (transistors). Its components compensate for the voltage drop and ensure that charging continues at the right voltage level, even with several battery banks. The Battery Mate is compatible with any type of alternator/battery charger, in both existing and new systems. As the voltage loss between the alternator and battery is negligible, the Battery Mate performs far better than conventional battery isolators. This ensures fast and complete charging of your batteries without having to make additional adjustments to the alternator.

Charge Mate

A secondary battery is becoming increasingly common. As a second battery can prevent the main battery from depleting and being unable to start, this seems like a safe and reliable solution. The second battery, however, also has to be charged regularly. The Charge Mate series connects both batteries during charging and keeps them isolated when discharging. The Charge Mate 1202 and 2502 are especially practical for small systems, the Charge Mate Pro provides additional functionality by limiting the charge current to the second battery to 40 A or 90 A. The main battery is therefore charged with priority. The return current is automatically blocked and power dips of the onboard network are reduced. An emergency start function is possible by connecting an optional bypass switch.

MASTER TIP

Easy power management and extensive monitoring

Mastervolt delivers top-quality components which communicate with each other through an extensive network. Thanks to multiple remote panels and the possibility to integrate equipment by other brands, customers can control their energy system in whatever way they find suitable, at any time and in any place.

In modern systems "open" communication is the standard. It is expected that the complete system from displays, chart plotters, fish finders to battery chargers and digital switches all communicate on the same common channel, without specific knowledge of the components.

The purpose of a common channel is to easily share information and facilitate a better user experience. To facilitate this sharing of information, Mastervolt devices will – next to the familiar MasterBus communication protocol – also feature CZone / NMEA 2000 communication. With the known infrastructure of CZone you can easily create configuration files that can be shared and multiplied in other systems.

MASTERBUS

The MasterBus platform automates your power system by facilitating seamless communication between all Mastervolt products, bringing advanced system functions easily within reach at reasonable cost, for perfect control!

82 DISPLAYS

The waterproof EasyView 5 system monitor makes operating your system personal and simple. The MasterView Read-out provides a clear overview of your batteries' charging status and any errors.

84 NETWORK COMPONENTS

Mastervolt offers various MasterBus components to further optimise your power system. Examples include MasterShunt, an intelligent battery monitor that enables system automation, and DC Distribution, the smallest DC distributor on the market.

86 INTERFACES

Seamless integration of products not equipped with a MasterBus interface, or communication standards such as NMEA 2000, CANopen, Modbus, FireCAN, PBUS and many others.

91 ACCESSORIES

MasterBus accessories such as MasterShunt fuses, cables and terminators, plus DIY packages.

RECOMMENDED FOR:

Manage & Monitor

CZONE

Decentralised switching results in smart systems, fewer cables and less installation work. The CZone operating and monitoring system offers decentralised digital switch modules for operating equipment such as lighting, pumps and navigation equipment.

96 DISPLAYS

The Touch 5, Touch 7 and Touch 10 touchscreen displays form the interface between the CZone network and the user.

101 COMPONENTS

The CZone operating and monitoring system offers a bespoke solution for any operating system including COI; DC input/output interface, ACOI for AC circuits or the ACMI; a grid voltage transfer system.

RECOMMENDED FOR:

110 INTERFACES

The Wireless Interface enables safeguarding and monitoring of your on board system using an iPad. The CZone MasterBus Bridge Interface combines MasterBus and CZone into one compact operating and monitoring system.

112 ACCESSORIES

Accessories such as NMEA 2000 certified cables, remotes, cable glands and connector blocks complete your CZone system.

BATTERY MONITORING

A Mastervolt battery monitoring system prevents unpleasant surprises.

119 BATTMAN

Choose the easy-to-use BattMan Lite, or the complete BattMan Pro for indication of remaining time and historical data.

119 MASTERLINK BTM-III

The comprehensive BTM-III monitors three batteries, including indication of remaining time and capacity.

119 MASTERSHUNT + EASYVIEW 5

A MasterShunt and EasyView enable complete energy management in a personalised way.

RECOMMENDED FOR:

The intelligent simplicity of MasterBus

The advanced functions of custom made systems are now within easy reach thanks to the MasterBus platform (single communication protocol with high-speed CANbus technology). The intelligent, one-cable MasterBus network greatly simplifies wiring, saving you valuable space and weight. Additionally, you can automate and customise your system to meet all your requirements.

As owners demand high levels of onboard luxury and comfort, professional and recreational applications need to carry more equipment which in turn takes up more space. This makes it all the more essential to intelligently install equipment in the available space - and that is where the MasterBus communication network of Mastervolt comes in.

The wide range of interfaces and modules allows you to connect any equipment you wish to your MasterBus system and manage, monitor or operate it locally, centrally or even from your home. The galvanic isolation of the MasterBus network ensures a safe and stable network.

Professional Perspective

MasterBus also makes life easier for designers, builders and installers of power systems with less material, less work, less fuss and an easy testing method. Additionally, it is available in ten languages and offers the same user interface for all (Mastervolt) products, such as battery chargers, inverters, Combis, batteries or other devices. All control panels have an identical layout, with or without PC software.

Easy Maintenance

Replacing a component can often lead to complex configuration problems. Not with Mastervolt. The MasterBus network 'recognises' any replacement directly and automatically asks whether you want to keep the same or change your configuration. You stay well informed and with everything under control.

MasterBus Displays: Monitor & control your MasterBus network

Fast and clear information about your electrical system is vital. Usually multiple panels are required to read the details of an expansive electrical system, and the interpretation of these panels and how they relate to one another is left to the user. Mastervolt puts an end to this undesirable situation by using a clear communication platform (MasterBus) and the smart EasyView 5 display.

EasyView 5

Waterproof System Monitor with intuitive touchscreen

The EasyView 5 features a sharp, waterproof display which is clearly readable in daylight. Thanks to the colour touchscreen and multi-language menu, the display is a pleasure to operate. Easily customizable favourite pages show all relevant system information at a glance.

The EasyView 5 completes any MasterBus system. With its handy functionality and compact size, the EasyView is ideal for yachts, vehicles and stationary systems. Controlling your Mastervolt system has never been easier!

FEATURES

- Water proof, 'daylight readable' colour display.
- Intuitive touch control.
- Customizable favourite pages.
- Log book for warnings and alarms.
- Buzzer and Home button.
- Easy mounting: front mount, wall mount or retrofit.
- MasterBus powered, or 12/24 V input.
- Easy updating through MasterBus and USB.

| | EasyView 5 |
|--------------------------|--|
| Product code | 77010310 |
| GENERAL SPECIFICATIONS | |
| Power supply | MasterBus powered, or 12/24 V input |
| Resolution | 480 x 272 pixels |
| Colour depth | 16 bits |
| Display/read-out | 4.3 inch high contrast display with capacitive touch control |
| Languages on display | ENG, NL, DE, SP, IT, FRA, FIN, SWE, DEN, NOR |
| Mounting | panel mounting, flush mounting, MasterView Easy retrofit |
| Alarms | buzzer integrated |
| Dimensions, hxwxd | 113 x 127 x 43 mm 4,4 x 5,0 x 1,7 inch |
| Weight | 300 gr / 0.7 lb |
| Delivered with | UV protection cover, wall mount casing, MasterBus cable |
| TECHNICAL SPECIFICATIONS | |
| MasterBus connection | yes |
| Power consumption | < 160 mW (idle mode) |
| Connections | 2x MasterBus, USB, 12/24 V |
| Protection degree | IP67; waterproof front |

Some examples of the many possibilities:

Customize Favourites

Customize favourite pages to meet your specific needs for information and control, to show information in the most convenient way.

Adjust Parameters

Use the EasyView 5 to adjust frequently used settings, like the shore fuse or to switch on your inverter.

Modify System Settings

In the system page you will find every possible system setting.

Alarms and Logs

No surprises! The EasyView 5 helps to keep your system in top condition by assisting you with alerts. Logging of the alarms provides valuable insight in the operation of your system.

SmartRemote

Compact single-device display

The SmartRemote completes any MasterBus or CZone system. With its handy functionality and compact size, the SmartRemote is ideal as a remote panel in entry level power systems or as a local device readout in larger systems. Applications include boats, vehicles and stationary systems.

Easy to use

The new SmartRemote single-device display is unique in many ways. It communicates with Mastervolt devices*, shows key parameters, allows simple device settings and is fun to use. Checking your batteries, adjusting your shore fuse or controlling your Mastervolt charger/inverter has never been easier.

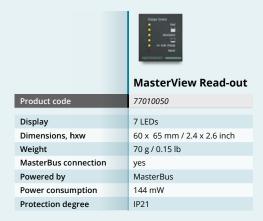

Easy of Installation

The SmartRemote display can be panel mounted or may be integrated into a Blue Sea Systems Custom 360 bezel. Connection is easy as 1-2-3: simply click the network cable into a Mastervolt device and off you go.

MasterView Read-out

Remote panel for reading the charge status of your battery charger, including error notifications.

If your dashboard is full and does not offer space for the EasyView display, this module allows you to integrate the MasterView Read-out into your own control panel.

MasterBus Network Components

MasterShunt 500 CZONE

MasterShunt is the heart of every MasterBus energy system. This integrated battery monitor shares information about the battery bank with other MasterBus, CZone or NMEA 2000 enabled devices such as Displays, battery chargers and Combi's. No surprises: allowing complete automation of your system, MasterShunt improves comfort, prolongs battery life and extends your runtime.

The MasterShunt 500 provides all information needed for monitoring your battery bank and control of your system, such as voltage, current, state of charge and time remaining. All information is made available to the system by a single MasterBus or CZone cable. Extremely accurate measurement of current flow over state of charge enables the MasterShunt to precisely determine the time remaining.

Programmable events and an integrated real time clock make it possible to fully automate your system. Examples are to start your generator automatically when the battery bank is low (or just delaying at night!), or to automatically generate a warning at a certain depth of discharge.

The proven MasterShunt design has been upgraded to obtain an even higher level of accuracy and control. Taking into account battery specific parameters, MasterShunt takes reading accuracy to a whole new level.

A new service mode prevents loss of valuable information, such as the state of charge, during system maintenance. A maximum Depth of Discharge (DOD) can be set and time remaining will be adjusted accordingly.

The MasterShunt allows freedom of choice with regards to fuse type, rating and location. The battery monitor is supplied with an internal bus bar, to be used in situations where an external fuse holder is selected. In case the MasterShunt is installed close to the battery, the bus bar may be replaced by either an ANL type or Class T main fuse, saving both space and cost.

FEATURES

- MasterBus, CZone and NMEA 2000 communication.
- Fits in a CZone system including setup tools and configuration file
- Digital shunt providing the energy system with extensive information and historical data.
- Very accurate and reliable determination of State of Charge (SOC).
- Service mode prevents memory loss during system maintenance.
- Realistic and precise indication of the time remaining.
- Smart MasterBus powering mode reduces idle consumption to a bare minimum.
- For higher current, multiple MasterShunt models may be installed in parallel.
- MasterConnect system makes connecting to the DC Distribution product very easy.
- Straight forward, easy to install.
- Freedom of choice for fuse type, rating and location. Suitable for T-fuse and ANL-fuse (to be ordered separately).
- Robust housing with isolation of the DC connections.

| | MasterShunt 500 |
|----------------------|--|
| Product code | 77020115 |
| Dimensions, hxwxd | 150 x 150 x 65 mm 5.9 x 5.9 x 2.5 inch |
| Weight | 0.7 kg / 1.54 lb |
| Battery types | Gel, AGM, flooded, Lithium Ion |
| Battery voltage | 12, 24 or 48 V DC |
| Current | 300 A continuously, 400 A for 10 min, 500 A for 5 min and 600 A for 2 min |
| MasterBus powering | yes, incl. Smart MasterBus Powering (switched off for CZone or NMEA 2000 communication) |
| Idle consumption | 23 mA (normal operation), <1 mA (power saving, MasterBus off) |
| System functionality | alarm, timers, auto start/stop for the generator |
| System information | e.g. time remaining, voltage, current, state of charge |
| Programmable alarms | warning low voltage, warning low state of charge, high voltage |
| Protection degree | IP21 |
| Main fuse | bus bar included in MasterShunt, Class T fuse or ANL fuse to be ordered separately |
| Delivered with | MasterShunt, temperature sensor, MasterBus terminator, isolation cover for DC connections, 1 mtr CZone-Mastervolt drop cable |

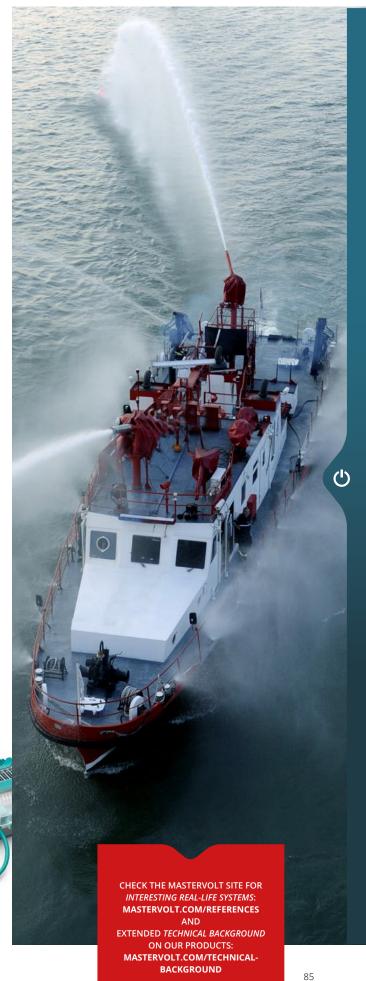

DC Distribution 500

The DC Distribution 500 is the smallest distribution model available. It connects up to four DC devices, such as a battery charger, inverter, alternators and solar panels. With the plug & play cable it can be easily connected to the MasterBus network. The EasyView panel gives all fuses logical names, for instance, referring to the connected equipment, to ensure you receive understandable error notifications (for example: battery charger fuse defect).

| | DC Distribution 500 |
|--------------------|---|
| Product code | 77020200 |
| Dimensions, hxwxd | 150 x 216 x 65 mm 5.9 x 7.9 x 2.5 inch |
| Weight | 1.2 kg / 2.6 lb |
| Battery voltage | 12, 24 or 48 V DC |
| Current | 300 A continuous / 500 A for 5 minutes |
| MasterBus powering | no |
| Standard fuses | 80 A (2x), 160 A and 125 A - ANL type (deviating values can be ordered separately) |
| Spare fuse | 125 A - ANL type |
| Alarm | fuse monitoring |
| Protection degree | IP21 |
| Delivered with | four standard fuses and one spare fuse, hex tool, MasterBus terminator, MasterBus cable, cable protections for DC connections |

Integrate your MasterBus System: MasterBus Interfaces

Mastervolt offers a wide range of interfaces to increase the versatility of your MasterBus network. Connect multiple components to distribute information to your MasterBus products or connect products that require information from the MasterBus network, such as a NMEA 2000, CANopen or Modbus network, and vice versa.

All interfaces (and modules) can be installed in various ways, from DIN rails to surface mounting. MasterBus is available in ten languages: English, Dutch, German, French, Spanish, Italian, Norwegian, Swedish, Finnish and Danish.

MasterBus AC Master Interface

The MasterBus AC Master Interface is an addition to our range of MasterBus interfaces, allowing seamless integration of an AC Master inverter into every MasterBus network. Just as all other MasterBus interfaces, the AC Master Interface can be installed on DIN rails or as surface mounting.

By adding the AC Master Interface to your installation, you can now control your AC Master inverter via our MasterBus communication network. The AC Master Interface is suitable for all AC Master inverters with a RJ11 serial interface (all 700 W models and up). A communication cable is included in the delivery.

| | MasterBus AC Master Interface |
|--------------------|---|
| Product code | 77032700 |

| Dimensions, hxwxd | 66 x 78 x 32 mm |
| | 2.6 x 3.1 x 1.3 inch |
| Weight | ± 70 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | RJ11 connection cable (1 m), MasterBus cable (6 m), MasterBus |

MasterBus LIN Bus Interface

The MasterBus LIN Bus Interface has been developed to enable the Vokswagen Crafter to communicate with the Mastervolt MLI Ultra Lithium Ion battery. The MasterBus LIN Bus Interface is designed for use in vehicles equipped with a LIN enabled (secondary) alternator option.

It will guarantee a seamless integration of the MLI Ultra battery into the vehicle's LIN Bus and provide the alternator and Engine Control Unit (ECU) with the necessary data from the MLI Ultra battery to monitor and charge the battery accordingly.

Just as all other MasterBus interfaces, the LIN Bus Interface can be installed on DIN rails or as surface mounting. The LIN Bus Interface can be used in combination with the Mastervolt MLI Ultra batteries (MLI Ultra 12/2500 or MLI Ultra 12/5000).

| | MasterBus LIN Bus Interface |

| Protection degree | IP21 |
| Delivered with | screw terminal, MasterBus cable (1 m), |
| | MasterBus terminator, user's manual |
| | |

MasterBus FireCAN Interface

The MasterBus FireCAN Interface connects the vehicle's central communication system to the MasterBus network.
FireCAN is a standardised CANbus protocol for electronic applications in fire fighting vehicles, that incorporates manufacturer-specific components.

| | MasterBus FireCAN Interface |
|----------------------|---|
| Product code | 77032400 |
| | |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight (excl. cable) | 70 g / 0.15 lb |
| Protection degree | IP21 |
| Delivered with | FireCAN connection cable, MasterBus terminator, user's manual |

MasterBus NMEA 2000 Interface

The MasterBus NMEA 2000 Interface provides the MasterBus network with NMEA 2000 information, and vice versa.

| | MasterBus NMEA 2000 Interface |
|----------------------|--|
| Product code | 77031800 |
| | |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm |

| Weight (excl. cable) | 70 g / 0.15 lb |
| Protection degree | IP21 |
| Delivered with | NMEA connection cable, MasterBus cable, MasterBus terminator, user's manual |

MasterBus Modbus Interface

The MasterBus Modbus Interface can provide all information from the 'closed' MasterBus network for other monitoring and operating systems by means of the Modbus protocol.

| | MasterBus Modbus Interface |
|--------------------|--|
| Product code | 77030800 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | MasterBus cable, MasterBus terminator, user's manual |

MasterBus CANopen Interface

The MasterBus CANopen Interface facilitates transparent, 2-way communication between MasterBus and the CANopen standard, which is adopted in many automotive and industrial automation applications.

| | MasterBus CANopen Interface |
|----------------------|---|
| Product code | 77032600 |
| Programmability | MasterAdjust conventional configuration or string-based mapping |
| Data communicated | all MasterBus information and control items |
| Power consumption | < 40 mA |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm / 2.6 x 3.1 x 1.3 inch |
| Weight (excl. cable) | 70 g / 0.15 lb |
| Protection degree | IP21 |
| Delivered with | CANopen adapter cable (100 mm, M12 5-pin connector) and MasterBus terminator, user's manual |

MasterBus Philippi Interface

The MasterBus Philippi Interface makes it possible to view and control Mastervolt products on a Philippi PSM2 display. Mastervolt products use the CAN-based MasterBus protocol to communicate between products. Similar, the company Philippi uses the PBUS protocol. The MasterBus Philippi Interface connects these worlds.

| | Philippi Interface |
|----------------------|---|
| Product code | 77031850 |
| | |
| Programmability | automatic & manual configuration |
| Data communicated | selection of most popular values per product |
| Power consumption | < 40 mA |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm / 2.6 x 3.1 x 1.3 inch |
| Weight (excl. cable) | 70 g / 0.15 lb |
| Protection degree | IP21 |
| Delivered with | connection cable (100 mm), MasterBus cable, MasterBus terminator, user's manual |

Mastervolt USB Interface

The Mastervolt USB Interface enables you to read and configure the MasterBus network via your PC.

MasterBus Power Interrupter

The MasterBus Power Interrupter switches off parts of the MasterBus network. This reduces the no-load consumption and is useful if a large system will not be used for an extended period. Communication remains possible.

MasterBus Repeater

The MasterBus Repeater doubles the maximum length of your MasterBus network.

| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | USB connection cable, MasterBus cable, MasterBus terminator, user's manual |

| | MasterBus Power Interrupter |
|--------------------|---|
| Product code | 77031550 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | user's manual |

| | MasterBus Repeater |
|--------------------|--|
| Product code | 77031100 |
| MasterBus powering | yes |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 90 g / 0.20 lb |
| Protection degree | IP21 |
| Delivered with | MasterBus cable, MasterBus terminator, user's manual |

MasterBus Inverter Interface

The MasterBus Inverter Interface integrates the Mastervolt Mass Sine inverter in a MasterBus network and allows it to be operated and monitored via EasyView 5 or PC.

| | MasterBus Inverter Interface |
|--------------------|---|
| Product code | 77030700 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | Interface connection cable, MasterBus cable, MasterBus terminator, user's manual |

MasterBus Serial Interface

Connect conventional Mastervolt products to MasterBus. Data becomes permanently available to allow configuration, operation and monitoring via EasyView 5 or PC. Suitable for Masterlink BTM-III, Mass Combi, Mac and Magic DC-DC converters.

| | MasterBus Serial Interface |
|--------------------|---|
| Product code | 77030450 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | Interface connection cable, MasterBus cable, MasterBus terminator, user's manual |

AC Power Analyser

The AC Power Analyser is a multifunctional measuring device which can visualise the AC current and AC voltage, frequency, Cos Phi and power inside the system. Can also be used as MasterBus interface for the Mass Sine series, and offers a free programmable potentialfree contact.

| | AC Power Analyser |
|--------------------|--|
| Product code | 77031200 |
| MasterBus powering | yes |
| Dimensions, hxwxd | 80 x 181 x 28 mm 3.1 x 7.1 x 1.1 inch |
| Weight | ± 530 g / 1.17 lb |
| Protection degree | IP65 |
| Delivered with | MasterBus cable, MasterBus terminator, current transformer 100:5, user's manual |

Use it to connect AC power devices such as generators or isolation transformers to the MasterBus network.

MasterBus Tank Level Interface

This interface converts analogue sensor input signals to MasterBus data. Selectable input signals: 4-20 mA, 0-300 Ω , 8-70 V DC.

This potential-free programmable contact can be customised and programmed to give your MasterBus network unprecedented possibilities. Use it, for example, to control a ventilator, or to operate a generator.

| | MasterBus Tank Level Interface |
|--------------------|--|
| Product code | 77030300 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | MasterBus cable, MasterBus terminator, user's manual |

| | Multipurpose Contact Output |
|------------------------|--|
| Product code | 77030500 |
| Potential free contact | NO-C-NC - 1 A / 30 V DC |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | MasterBus cable, MasterBus terminator, user's manual |

Digital Input

Connect up to four switches to the MasterBus network. Delivery includes connection cables.

Digital AC 1x6A

Switches all AC loads, no matter where they are. Loads up to 6 A can be directly switched, higher loads should be switched via an external relay.

| | Digital Input |
|--------------------|--|
| Product code | 77030900 |
| MasterBus powering | no |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | cable with plug, MasterBus cable, MasterBus terminator, user's manual |

| | Digital AC 1x6A |
|--------------------|--|
| Product code | 77031500 |
| MasterBus powering | no |
| Max. relay current | 6 A (230 V AC single pole) |
| Dimensions, hxwxd | 66 x 78 x 32 mm 2.6 x 3.1 x 1.3 inch |
| Weight | ± 80 g / 0.18 lb |
| Protection degree | IP21 |
| Delivered with | MasterBus cable, MasterBus terminator, user's manual |

Switch Input 3 PCB

Switch Input 3 makes Carling switches compatible with MasterBus. Multiple functions can be easily linked with this module.

| | Switch Input 3 PCB |
|---------------------------|--|
| Product code | 77031300 |
| MasterBus powering | no |
| Dimensions, hxwxd | 54 x 86 x 58 mm 2 x 3.4 x 2.3 inch (incl. mounting frame) |
| Distance between switches | 26.1 mm |
| Weight | 35 g / 0.08 lb (incl. MasterBus terminator) |
| Protection degree | IP21 |
| Delivered with | MasterBus terminator, user's manual. Switches and mounting frame not included |

Switch Input 4 PCB

Provides LED indications for additional information. For example: The LED will blink when a connected lamp fails.

| | Switch Input 4 PCB |
|---------------------------|--|
| Product code | 77031400 |
| MasterBus powering | no |
| | |
| Dimensions, hxwxd | 56 x 120 x 65 mm 2.2 x 4.7 x 2.6 inch (incl. mounting frame) |
| Distance between switches | 27.3 mm |
| Weight | 45 g / 0.1 lb (incl. MasterBus terminator) |
| Protection degree | IP21 |
| Delivered with | MasterBus terminator, user's manual. Switches and mounting frame not included |

CZone MasterBus Bridge Interface

The CZone MasterBus Bridge Interface physically connects the MasterBus and CZone networks together, enabling the two networks to communicate and act as one. This provides seamless control and monitoring of Mastervolt power electronics from CZone displays or partner products.

FEATURES

- Control of Mastervolt inverters and chargers from CZone displays, switches or partner products.
- Display MasterBus acquired systems information such as tank and power levels on CZone displays.
- Transfer of alarms between both systems.

Practical: MasterBus Accessories

Fuses

The MasterShunt standard comes with a bus bar. You can also choose a robust Class T fuse, suitable for high short circuit currents of the Lithium Ion batteries, or for ANL fuses.

The DC Distribution standard comes with five ANL fuses: 80 A (2x), 125 A and 160 A, and a 125 A spare fuse. Replacement fuses and other amperages:

| Product code | ANL fuse |
|--------------|----------|
| 77049020 | 20 A |
| 77049040 | 40 A |
| 77049050 | 50 A |
| 77049063 | 63 A |
| 77049080 | 80 A |
| 77049100 | 100 A |
| 77049125 | 125 A |
| 77049160 | 160 A |

| Product code | ANL fuse |
|--------------|----------|
| 77049175 | 175 A |
| 77049200 | 200 A |
| 77049250 | 250 A |
| 77049300 | 300 A |
| 77049400 | 400 A |
| 77049425 | 425 A |
| 77049500 | 500 A |
| | |

MasterBus Terminator

The terminators ensure interference-free operation, prevent reflection of data signals and ensure high communication speeds.

MasterBus DIY kit

Cut your own cables to length and finish, comprising:

- Professional RJ45 crimping tool.
- 50 x MasterBus RJ45 connectors.
- 50 x green MasterBus RJ45 protection boots.
- 100 m green MasterBus CAT5E UTP cable.

| Product code | 77050000 |
|--------------|----------|

Mastervolt-CZone Drop Cable

Adapter cable for connecting Mastervolt devices with CZone support to the CZone or NMEA 2000 network.

| Product code | | |
|--------------|-------|---|
| 77060050 | 0.5 m | |
| 77060100 | 1 m | |
| 77060200 | 2 m | |
| 77060500 | 5 m | |
| | | 3 |

MasterBus Communication Cable

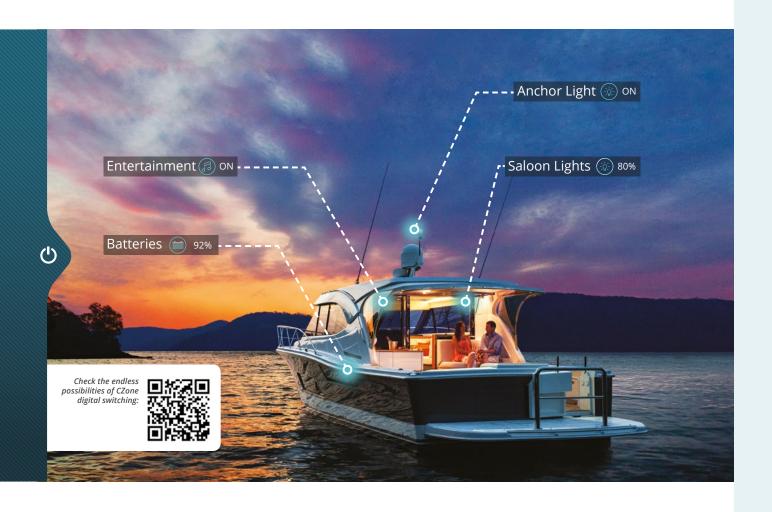

Suitable for data traffic and powering peripheral equipment in harsh environments, this is the only cable you need for your MasterBus network. MasterBus compatible products come standard with two ports, while other equipment requires an interface. A DIY kit is optional.

| Product code | | |
|--------------|-------|---|
| 77040020 | 0.2 m | |
| 77040050 | 0.5 m | |
| 77040100 | 1 m | |
| 77040300 | 3 m | |
| 77040600 | 6 m | |
| 77041000 | 10 m | |
| 77041500 | 15 m | |
| 77042500 | 25 m | |
| 77045000 | 100 m | V |

| Product code | |
|--------------|--|
| 77040010 | 25 x MasterBus RJ45 connectors, 8-pole |
| 77040015 | 25 x green isolation caps for RJ45 connector |

CZone® Digital Control and Monitoring

CZone digital control and monitoring simplifies installation of electrical systems through the replacement of complicated, cumbersome traditional wiring. CZone is perfect for Marine and Mobile applications and replaces switch and fuse panels with networked digital interfaces providing ultimate control of onboard electrical systems.

With one touch, CZone simplifies operation by combining multiple circuits into one Mode selection. Allowing you to start a certain activity or scene with only one touch of a button.

Monitoring oversight of key systems and components is now modern and effortless. While retaining advanced Control of specific circuits and functions, allowing you to manage combined and single circuits when needed.

Simplicity

CZone simplifies your boat or vehicle's onboard electrical system making it easier and more enjoyable.

Innovation

CZone offers system-wide functionality of your onboard systems onto a single screen or wireless device, while offering industry leading integration with suppliers from marine navigation displays, power storage and generation, and appliances like air-conditioning and more.

Reliability

CZone has proven durability, with over 10 years of installations in harsh marine environments through hundreds of dedicated boat builders and technical installers.

Modes

Modes offer a predefined system state at a single touch. Modes will turn on or off specified circuits based on the user's preference and the mode of operation required. Modes can introduce logic to handle functions based specifically for that mode of operation, whether it be integrated components like generator auto-start, or varied lighting configurations. If it needs power, Modes can take care of it in a single function.

UOTE

"CZone provides Riviera owners with reliable onboard power electronics. The integrated system gives our owners more functionality with less components, while straightforward and practical design make installation simple. In Mastervolt, we have a partner that understands our requirements and provides Riviera with the quality and reliability our owners demand."

GREIG PAYNE, ELECTRICAL MANAGER RIVIERA YACHTS, AUSTRALIA

Check out the complete CZone
Digital Control & Monitoring
product line in the CZone
catalog or visit czone.net

Monitoring & System Alarms

CZone digital control and monitoring offers peace of mind by consolidating system information and pres-enting alarms when things aren't right. Monitor tank level senders, gas or temperature sensors, low power source voltage or reversed polarity. CZone's advanced monitoring ability means no irregularity in the system goes by without you knowing about it. Keep alerted to major system events with onboard alarm notifications.

Complete Control

CZone offers leading system control of onboard systems, from Modes selection that transforms the entire system at a single touch, wirelessly via iPad or Key fob. Full direct control is accessible using intuitive touch screen interfaces or through integrated marine Chartplotter & Fishfinder displays, or programmable digital switches for individual or group functions.

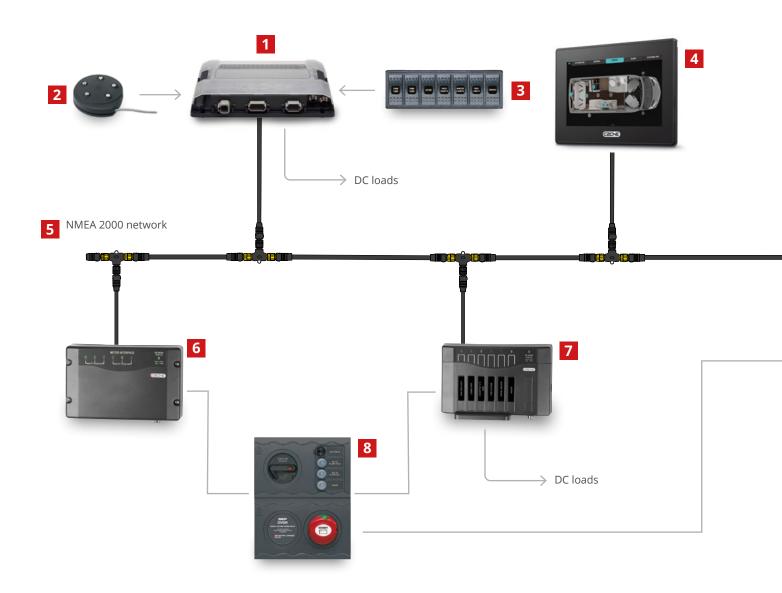

Fully Integrated CZone® Mastervolt System

CZone and Mastervolt now work together on a common network to simplify the operation of your application

For years, CZone has operated on a dedicated network, and Mastervolt has operated on a separate network (MasterBus). The two networks could only be joined through a bridge interface that had to be purchased and installed separately. Now, the two technologies are coming together to operate on a single common network. This advanced integration allows for a single user interface and shared configuration files that simplify programming and installation. Now you can control and monitor all AC and DC loads, as well as the power conversion system from a single source.

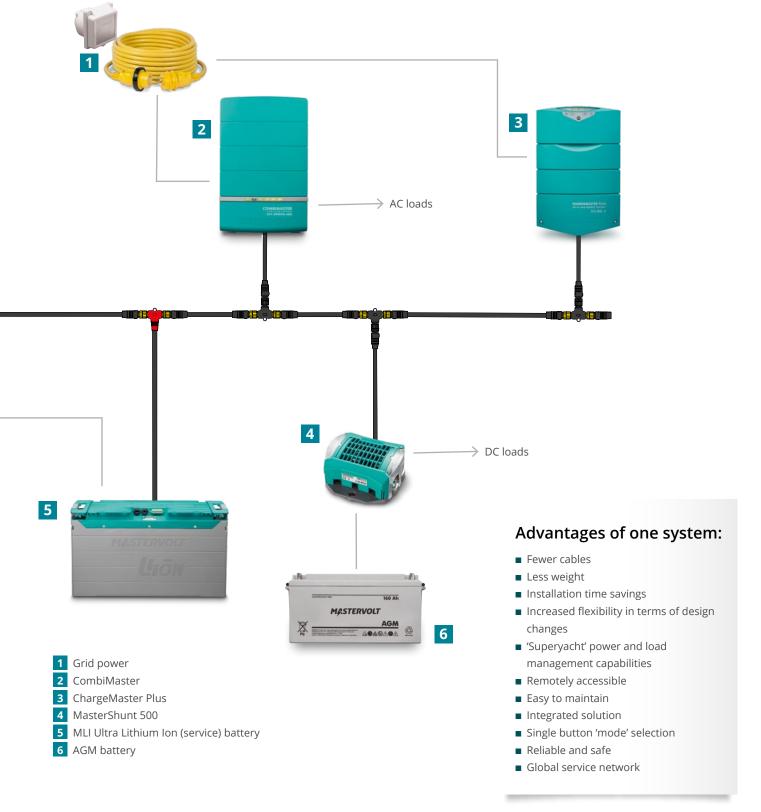

- 1 Combination Output Interface (COI)
- 2 Ultrasonic tank sender
- 3 Switch cluster
- 4 Displays

- 5 NMEA 2000 network
- 6 Meter Interface
- 7 Output Interface
- 8 Battery distribution panel

CZone Ready Products

Instant plug and play integration. The following products have been updated to directly integrate with CZone as well as MasterBus.

| ChargeMaster Plus battery charger | p. 22 |
|-----------------------------------|-------|
| CombiMaster inverter/charger | p. 50 |
| MLI Ultra batteries | p. 68 |
| MasterShunt 500 | p. 84 |

CZone® Displays

The CZone® displays are designed with both the manufacturer and end-user in mind. The easy-to-use display screens put the control of all components directly at your fingertips. Multiple display interfaces can be used in the same system. The scroll and click interface is simple to use in the roughest of seas or bumpiest of roads.

CZone displays are the interface between the CZone network and the user. They offer full control of circuits as well as the ability to view important onboard system information, such as tank levels and power levels (for both AC and DC supplies). Audio and visual alarms with systems diagnostics are also provided.

selected lights on to dim levels. These modes can all be configured by the user.

Settings

Allows an OEM or technician access (via password) to the configuration of a system. No need for a computer to set or change configuration settings such as circuit labels, circuit breaker sizes, etc.

Modes

Ease of operation assured. With one press of the key users can turn on a group of circuits without having to scroll, search for, and turn on the individual circuits that they need for the operation of their vessel or vehicle. When leaving, simply press "systems off" to turn off all non-essential circuits. Entertainment mode allows preset activation of lounge lights, music, etc. All functions can be controlled remotely.

Control

Breaks down the circuits into easy to identify groups for quick control, i.e. to turn on fresh water pump the user can open the "pumps" group and make the appropriate selection. This screen also allows the user to monitor the status of the circuit i.e. on, off, fault and current draw.

Power Control

- Turn circuits on and off, including timer and light dimming control.
- Set modes of operation.

Monitoring

Allows user to easily monitor AC and DC power, tanks, data, alarms, and circuit status. Presents data in analogue and digital form.

DC Power Meter

- Displays voltages of multiple battery banks, includes low and high voltage alarms.
- Displays charge and discharge (amp) of multiple battery banks.
- Displays battery capacity in ampere hours and % charge/ discharge, includes low ampere hour alarm.
- Logging of battery minimum and maximum voltage levels.
- Logging of minimum battery capacity level.

AC Power Meter

- Displays multiple line voltages (230 and 120 V), includes high and low voltage alarm.
- Displays AC line frequencies, includes high and low frequency alarm and AC power consumption in kW.
- Logging of minimum and maximum voltage and frequency levels.
- Logging of maximum AC current.

Tank Levels

 View tank level information for multiple tanks and fluid types.

Data

- Displays standard NMEA 2000 information.
- Displays temperature and pressure values.
- Monitors all circuits connected to the CZone network.

Alarms and Diagnostics

- Logging of circuit run time and on cycles.
- CZone network status reporting.
- Indicates alarms for onboard faults in audio and visual form (bilge pump operation, smoke alarm).
- Logging of alarms with date and time.

CZone® Displays

C7one Touch 10

The gateway to your CZone digital switching and Mastervolt power electronics system has just been transformed by the 'state of the art' Touch 10.

The sleek, attractive screen design will complement the interior of any high-end vessel or recreational vehicle, while offering the very latest generation capacitive touchscreen technology, high bright display for use in sunlight and high resolution providing a more crisp and detailed graphical user interface.

All of this has been packaged into an innovative, splash-proof marine mounting system to provide an outstanding 'humanmachine' experience.

| Product code | |
|-------------------|--|
| 80-911-0216-00 | CZone Touch 10 Generation 2 |
| 80-911-0101-00 | Retrofit plate |
| | (required for retrofitting old 10" Touch Screen) |
| Screen | 10.1" LED-backlit projected capacitive touchscreen display with IPS technology |
| Aspect ratio | widescreen 16:10 |
| Resolution | 1280 x 800 pixels |
| Protection degree | IP66 |
| Brightness | 500 cd/m ² |
| Supply voltage | 8-32 V |
| Power consumption | 1 A at 12 V, 500 mA at 24 V |
| Interfaces | NMEA 2000, USB2.0, Ethernet |
| Dimensions, hxwxd | 196 x 275 x 41 mm 7.7 x 10.8 x 1.6 inch |
| Weight | 1.8 kg |

Power cable for Touch 10 2 pin, 2 m / 6.5 ft 80-911-0032-00

Supplies power for Touch 10 display

CZone Touch 7

Introducing the CZone Touch 7. With an excellence 7" IPS LCD panel it can be viewed from any angle. The Touch 7 features all new electronics with the fastest dual core processor ever in a CZone Touch display and built in Wi-Fi connectivity and Ethernet for tablet pairing.

Installation is easy with front mount installation and screwless rear access, shallow 35mm mounting depths (including cable) and a wide 8-32V DC voltage range.

The Touch 7 also uses the familiar and easy to use CZone 2.0 User Interface, customizable for any OEM. The Touch 7 is primarily designed for RV applications, and any marine application should be reserved for parts of the vessel that remain dry.

| Product code | |
|--------------------|---|
| 80-911-0200-00 | CZone Touch 7 |
| Screen | 7.0" LCD display (optically bonded) with IPS technology, projected capacitive touchscreen |
| Resolution | 1024 x 600 pixels |
| Aspect ratio | widescreen 16:9 |
| Brightness (cd/m²) | 550 cd/m ² |
| Colour depth | 24-bit RGB |
| Processor | NXP / Freescale i.MX6DL Dual-Cortex A9 |
| Interfaces | USB 2.0, Ethernet, NMEA 2000, WiFi |
| Supply voltage | 8-32 V |
| Power consumption | 430 mA at 12 V (operating - backlight 100 %) - 130 mA at 12 V (standby – backlight off) |
| Protection degree | none, IPx0 (Touch 7 has been designed primarily for RV applications, any marine application should be reserved for parts of the vessel that remain dry) |
| Dimensions, hxwxd | 195 x 130 x 41 mm 7.7 x 5.1 x 1.6 inch |
| Weight | 0.7 kg 1.5 lb |
| Compliance | CE, FCC, RCM |

CZone Touch 5

The sleek Touch 5 adds a compact touchscreen option to your CZone installation. While offering many of the same features as its bigger brother, the Touch 10, this display module adds WiFi connectivity as well as the higher specification IPx7 waterproofing.

With a super bright widescreen display and the latest capacitive touchscreen technology, this compact unit outperforms perfectly in sunlight. It also suits smaller applications where space is at a premium, or on larger applications as a secondary display.

FEATURES

- Easy to use touch interface.
- Glass dash styling.
- Super bright widescreen display.
- Low profile flush mounting.
- Reduced system cost and complexity, combines display and Wireless Interface functionality into one unit.
- IPx7 water ingress protection.
- Built-in WiFi connectivity.
- Micro SD card slot.
- NMEA 2000 compatible.

| Approvals | CE, RCM |

Let CZone® do the thinking...

CZone removes the one-to-one relationship between each physical switch and the item being controlled, and allows multiple devices to be controlled by a single touch.

This simplifies the display and ensures critical items are not forgotten, like navigation lights when running at night. The combinations can also overlap, allowing the same device to be controlled in different ways by different modes.

Modes

So for example a mode for "Daytime Running" might turn on the fridge, fresh-water pump, toilet pump and bilge blower. A "Night Running" mode might add navigation lights to this and dim the instrument lights, while a "Night Anchor" mode would turn these off and replace them with the anchor light, interior lights and underwater lights. In this way a small number of programmed modes could cater for all the combinations required during normal operation.

Creating modes is done using the CZone configuration software, and this can incorporate suitable graphics. Modes can then be programmed to display graphically which devices are enabled for each mode, ensuring immediate understanding of what the state is of each device is in the current mode.

JIOTE

"Al Harrington commissioned Nexus Yachts to build a fast cruising technologically advanced bluewater cruising Catamaran. After a thorough investigation into electrical systems Al concluded that a combination of CZone Digital Switching and Mastervolt power electronics was the correct choice for him. Waterline Systems was contracted to design and install the system. Sixty eight CZone and twenty five MasterBus components were integrated using the CZone MasterBus Bridge Interface. After 1.5 years of cruising we are pleased to report that this was a great choice. The system has proved to be reliable, flexible and user friendly. This resounding success has resulted in a very happy yard and owner."

CZone® DC Interfaces

CZone Combination Output Interface (COI)

The Combination Output Interface (COI) combines multiple input and output devices into one module, offering a compact and intelligent replacement for traditional DC fuse boxes and circuit breaker panels with digital switching technology.

Digital switching systems just became more cost effective and easier to install with the CZone Combination Output Interface (COI). This one box replaces up to five separate units, with convenient Deutsch connectors and IPx5 water resistance, providing a complete CZone system for smaller applications. The COI's high continuous power output (150 amps), plus space, installation time and cost savings also make it the perfect building block for larger systems.

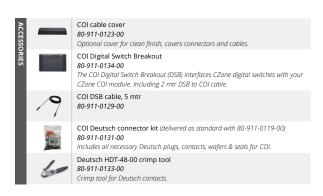

Partnered with either a dedicated CZone display, or with a multi-functional display from one of our integration partners (B&G, Furuno, Garmin, Lowrance, Simrad), the Combination Output Interface heralds a new era in providing simple, intuitive control over the increasingly complex systems found on today's applications.

FEATURES

- High density 30 channel module minimizes installation, interconnections and footprint, while delivering best value per circuit.
- Full mechanical fuse protection plus bypass on all circuits as required by ABYC/CE.
- Industry standard Deutsch connectors provide fast, plug & play installation. A Deutch connector kit is delivered as standard with product code 80-911-0119-00.
- Optional cable cover offers improved aesthetics and greater mounting flexibility.
- Proven, rugged CZone design includes IPx5 water ingress protection and NMEA 2000 certification.
- High power bilge pump channels allow manual control plus 'pump running' feedback from a single channel – without additional wiring.
- USB port provides easy system update from USB flash drive.

| Product code | |
|--|---|
| 80-911-0119-00 | CZone COI with connectors |
| 80-911-0120-00 | CZone COI without connectors (for refit or service purposes) |
| Communication protocol | NMEA 2000 |
| Channels | 30 |
| Output channels (high) | 4 x 25 A |
| Output channels (low) | 12 x 10 A (dimmable) |
| Analogue inputs | 8 (positive or negative switching, 0-32 V) |
| Additional monitoring | 2 voltage sensors (on main positive stud and NMEA 2000 power) |
| Circuit current monitoring | all 16 output channels |
| Circuit protection | configurable electronic fuse + mechanical fuse and bypass |
| Digital switch inputs | 6 digital input switches with backlight via digital breakout |
| Max. continuous current | 150 A at 40 °C (derating > 40 °C) |
| NMEA 2000 power consumption | 250 mA at 12 V 180 mA at 12 V standby |
| Connectors | Deutsch |
| Power supply | M8 (5/16") stud positive, M6 (1/4") stud negative |
| Supply voltage | 9-32 V (with power available LED and voltage monitoring) |
| Bilge pump circuits | 4 high current channels: integrated manual control and 'pump running' detection |
| Protection degree | IPx5 (mounted at 0° +/- 90°) |
| Dimensions (incl. optional cable cover), hxwxd | 338 x 235 x 62 mm 13.3 x 9.3 x 2.4 inch |
| Weight | 1.9 kg / 4.2 lb |
| Approvals | CE, ABYC, NMEA |

CZone® DC Interfaces

CZone Control 1 Interface

The Control 1 Interface combines multiple input and output devices into one module. This minimizes time and effort during installation by reducing connections between multiple modules and the footprint required. The Control 1 Interface incorporates many of the core features and benefits of the fully featured Combination Output Interface (COI), but has been re-engineered to offer improved cost-per-channel value.

The Control 1 Interface features the same rugged design as the fully featured COI with IPx5 water ingress protection and complete mechanical fuse and bypass on all circuits. Industry standard Deutsch connectors provide reliable plug and play installation.

Control 1 Interface builds onto CZone's portfolio of leading digital control and monitoring products. Delivering only the essential features required for small systems, the Control 1 Interface increases affordability and ensures the benefits of CZone are accessible to a wider range of applications than ever before.

| Product code | |
|--|---|
| 80-911-0122-00 | CZone Control 1 Interface |
| Communication protocol | NMEA 2000 |
| Output channels (high) | 4 x 25 A |
| Output channels (low) | 12 x 10 A (dimmable) |
| Analogue inputs | 8 inputs (positive or negative switching, 0-32 V), 0-1000 Ohm resistance, 4-20 mA current |
| Additional monitoring | 1x voltage sense on main positive stud |
| NMEA 2000 PGN output | fluid Level, pressure, temperature, battery voltage |
| Circuit current monitoring | no |
| Circuit protection | ATC fuse with fuse tripped & fuse in bypass alarms |
| Circuit bypass | mechanical protection / bypass all output channels |
| Max. continuous current | 150 A at 40 °C / 104 °F (derating > 40 °C / 104 °F) |
| Power consumption | operating (all channels On) = 100 mA at 13.2 V / operating (all channels Off) = 75 mA at 13.2 V |
| Connectors | Deutsch |
| Power supply | M8 (5/16") stud positive, M6 (1/4") stud negative |
| Supply voltage | 9-32 V (with power available LED) |
| Bilge pump circuits | 4 high current channels: integrated manual control and 'pump running' detection |
| Protection degree | IPx5 (mounted at 0° +/-90°) |
| Dimensions (incl. optional cable cover), hxwxd | 339 x 194 x 65 mm 13.3 x 7.6 x 2.6 inch |
| Weight | 1.9 kg / 4.2 lb |
| Approvals | CE, ABYC, NMEA, ISO8846/SAEJ1171 Ignition Protected |

FEATURES

- Complete CZone Control and Monitoring system in a single box.
- Modular design provides system options for wide range of vessels and RV's.
- Compatible with marine multi-function and black box chartplotter / fishfinders.
- Equipped with advanced core CZone feature set.
- Competitive price point for cost sensitive applications.
- ABYC compliant ATC fusing and mechanical bypass for redundancy.
- PWM (pulse-width modulation) light dimming capability & smooth start.
- Monitor tank levels, battery voltage, temperature and pressure using industry standard sensors.
- Bilge Pump Run Detection allows pump control and monitoring from a single wire.
- Status LEDs for all outputs, DC supply and NMEA 2000.
- Additional volt monitoring on main DC connection and NMEA 2000.
- In-built load shedding allows non-necessary loads to be turned off to preserve battery life.
- USB port allows full system firmware and configuation updates (no PC or adapters required).

CZone Control X Interface

Control X is CZone's smartest, sleekest and most compact module.

Control X is Czone's smartest and sleekest module, and the first with a fully waterproof enclosure. Configurable input and output channels provides ultimate flexibility to optimize system design and installation. Control X uses the latest smart MOSFET switching technology providing improved reliability, and silent operation. Features such as multiple RGB lighting control zones, reversing motor H-bridge outputs and wiper motor synchronization eliminates the need for 3rd party controllers giving installers complete flexibility to configure the modules to specific requirements.

| | |

FEATURES

- Ignition Protected IPX7 waterproof enclosure
- RGBW light controller
- Wiper motor control with synchronization
- Configurable I/O channels for ultimate flexibility
- Current monitoring with software fusing
- Manual override touch panel
- Multiplex switch inputs
- Moulded in Deutsch receptacles

ADDITIONAL FEATURES

- Configurable input and output channels.
- 100% solid state Smart MOSFET switching technology provides improved reliability, silent operation & smaller footprint than traditional relays.
- Current monitoring with automatic software fusing protection removes the need to purchase and install physical fuses.
- 45% smaller footprint than COI/Control 1 with flexible configuration options.
- Built in RGB controllers means seamlessly integrated lighting controls, with the ability to have independently operated lighting zones.
- Dual speed wiper motor controller with wiper synchronization for up to 4 motors per module and 3 configurable intermittent timer settings.
- Automatic bilge pump running detection on all output channels

CZone® DC Interfaces

CZone Contact 6 PLUS

Utilising proven CZone digital switching technology the Contact 6 PLUS is a robust and affordable digital switching solution. Featuring 6x 15A solid state ignition protected fused outputs with circuit bypass for system redundancy.

The Contact 6 PLUS can be networked into an existing CZone system or installed stand-alone with the CZone Waterproof Keypads or compatible multi-function displays. The Contact 6 PLUS integrates with all major marine chart plotter and multi-function display manufacturers for direct control of electrical systems from your display, including fault warning notifications and circuit status indication.

- Circuit dimming & smooth start capability.
- Status LED's for all outputs.
- Ultra low current draw.
- Built-in timer functions for circuits like live bait tanks
- Voltage monitoring on the NMEA 2000 network.
- Built-in Load Shedding allows non-essential loads to be turned off to preserve battery life.
- Built-in default configurations selectable via dip switch
- Affordable add-on module to larger CZone systems.
- Blown fuse detection and warning.

EXTENDED TECHNICAL BACKGROUND
ON OUR PRODUCTS:
MASTERVOLT.COM/TECHNICALBACKGROUND

CZone 2 Module Smart Harness

80-911-0171-00

CZone utilizes the industry standard NMEA 2000 network for its communication protocol. The 2 Module Smart Harness replaces the need for a complete network backbone in a small system, meaning a robust, simpler and more cost-effective installation. The Smart Harness can also be fitted independent to any CZone installation where a small network comprising 2 devices is required.

CZone 3 Module Smart Harness

80-911-0134-00

The 3 Module Smart Harness replaces the need for a complete network backbone in a small system. 3 Module Smart Harness connects two 6-button Waterpoof Keypads to the Contact 6 PLUS Module. Not required when connecting to NMEA 2000 network. The Smart Harness contains internal network terminations and will compromise a standard backbone.

CZone Waterproof Keypad (portrait) 80-911-0163-00

CZone Waterproof Keypad (landscape)

80-911-0162-00

The CZone Waterproof Keypad range features dimmable RGB circuit backlighting in a robust IPx7 waterproof enclosure and is available in portrait and landscape orientations.

CZone Contact 6 Plus Connector & Seal Kit 80-911-0179-00

The CZone Contact 6 PLUS Connector & Seal Kit contains additional or replacements,

suitable for the Contact 6 PLUS Module.

CZone Contact 6 PLUS System

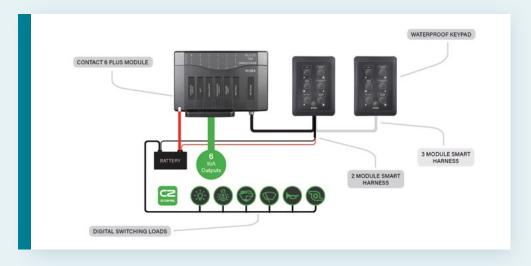

Combine Contact 6 PLUS with the Waterpoof Keypad and Smart Harness to achieve a very affordable digital switching system, that reduces installation time, network component cost and delivers a robust electrical system with fewer connection points than a conventional installation. The CZone Contact 6 PLUS System provides an ultra-low current draw state to reduce demand on small electrical systems yet still delivers features such as timer functions and Load Shedding to preserve critical battery life by turning off non-essential loads as voltage drops.

- Low cost digital switching system.
- Simple installation.
- Greater reliability with fewer connections.

System examples

STANDALONE

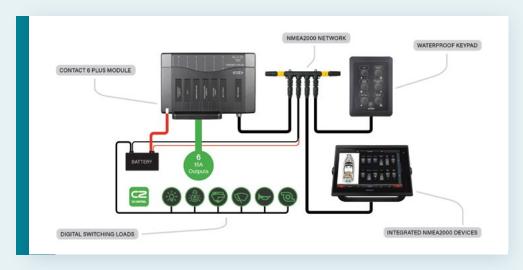

The Contact 6 PLUS and Waterproof Keypad can be networked using the Smart Harness without the need for a full NMEA 2000 network backbone. The Smart Harness is available in 2 and 3 module versions which are perfect for a Contact 6 PLUS Module and one or two Waterproof Keypads providing six or twelve switch positions.

- No NMEA 2000 network backbone required.
- Cost effective and simple installation.
- More reliable with less connection points.

NETWORKED

The Contact 6 PLUS and Waterproof Keypad are fully NMEA 2000 compatible and can be used as low cost components of a larger CZone installation with a full network backbone. In a networked installation the NMEA 2000 backbone replaces the Smart Harness.

- Low cost addition to a larger installation.
- Compatible with most Marine multifunction displays.

CZone® Network Components

CZone Contact 6 Interface

| Product code |
|------------------------------------|
| 80-911-0140-00 |
| Delivered with gland and plug pack |

The CZone Contact 6 is an entry level digital switching module. It offers six independent channels of positively or negatively switched output channels and is ideal to standalone on smaller marine or recreational vehicle applications, or as part of a larger network. The Contact 6 can be networked via NMEA 2000 and controlled using a CZone Touch display, wirelessly using a CZone Wireless Interface, networked Multifunction Display or digital push or toggle switch.

CZone Contact 6 Interface

Entry level digital switching module for 12 V marine and RV applications.

Stand alone or networked with other CZone products.

Compatible with CZone integrated Multifunction Displays (MFD's).

Six independent dry contact relays allow positive, negative and reversing motor control.

Dimensions, hxwxd:

100 x 156 x 42 mm / 3.9 x 6.1 x 1.7 inch

IPx5 water ingress protection.

Conform NMEA 2000.

Proven CZone technology.

Internal auto-resetting fuses.

Electronic relay bypass switch.

Status LEDs/fault codes for all channels.

CZone Switch Control Interface (SCI)

| Product code | Product code |
|---------------------------------------|----------------------------------|
| 80-911-0011-00 | 80-911-0012-00 |
| Switch Control Interface with seal | Switch Control Interface only |

The Switch Control Interface provides an interface between the CZone network and the traditional mechanical switches with which manufacturers and users are familiar. The SCI simplifies your wiring, supports your existing choice of switches, protects against failures and allows for more installation options.

CZone Signal Interface (SI)

| Product code | Product code |
|--|-----------------------|
| 80-911-0013-00 | 80-911-0014-00 |
| Signal Interface with seal and connector | Signal Interface only |

The Signal Interface connects the CZone system to your external sensors, alarms and switching devices. The SI allows intelligent, automated operation of circuits depending on the state of the input.

CZone Switch Control Interface (SCI)

Single switch position can control multiple OI channels.

Attaches to switch panels via custom SCI cable.

Multiple SCI switches can control single OI channel.

Output for backlighting of switch labels (dimmable)

Outputs systems on and function/fault codes to systems on LED of switches (dimmable).

Dimensions, hxwxd:

100 x 156 x 42 mm / 3.9 x 6.1 x 1.7 inch

IPx5 water ingress protection.

Programmable switch types.

8 inputs per module (16 individual controls).

Sequential button press functionality.

Choice of push button or rocker style switch.

CZone Signal Interface (SI)

Accepts inputs from traditional switch types being used to control outputs.

Accepts inputs from switches to trigger alarm i.e. high water float switch.

Accepts inputs from industry-standard tank senders (0-5V, 10-180 Ohm, 240-33 Ohm).

Accepts inputs from general voltaic or resistive signals, can be used for controlling outputs or to display a physical position, e.g. show a hatch is partially open.

LED status indicators for each input.

Dimensions, hxwxd:

100 x 156 x 42 mm / 3.9 x 6.1 x 1.7 inch

IPx5 water ingress protection.

Outputs standard NMEA 2000 sentences.

Resistive input range 0-1000 Ohms.

Voltage sensing input range 0-34 V DC.

Cable gland for SCI, silicone 80-911-0035-00

Hole plugs for SCI cable glands, 5 mm 80-911-0017-00

NOTE: High and low alarm levels can be set for all inputs.

CZone Meter Interface (MI)

| Product code | Product code |
|----------------------|----------------------|
| 80-911-0005-00 | 80-911-0006-00 |
| Meter Interface with | Meter Interface only |
| seal and plug | |

The Meter Interface accepts inputs from external AC and DC power metering sensors such as: AC and DC voltage and amps, AC kWatts, and DC battery capacity in amp hours and % remaining. All with user definable high and low alarms.

CZone Meter Interface (MI)

AC

3 x AC voltage inputs (multi voltage).

2 x AC current inputs.

Calculates true RMS power.

DC

3 x DC voltage inputs (multi voltage).

2 x DC current inputs.

Calculates battery capacity as ampere hours and percentage charge remaining.

Resolution for current metering down to 0.1 A.

GENERAL

Dimensions, hxwxd: 100 x 156 x 42 mm / 3.9 x 6.1 x 1.7 inch

IPx5 water ingress protection.

Outputs standard NMEA 2000 power monitoring sentences.

CZone Motor Output Interface (MOI)

| Product code | Prou |
|---|-------|
| 80-911-0007-00 | 80-91 |
| Motor Output Interface with connector and | Moto |
| protective boot | |

Motor Output Interface

The Motor Output Interface has an output pair for controlling DC motors which require a reversal of polarity to change the direction of their mechanical operation. For example, a DC motor for an electric window mechanism will move the window up or down depending on the polarity of the feed to the motor. The MOI also incorporates two standard output channels as found on the Output Interface (OI).

CZone Motor Output Interface (MOI)

Single motor control and two normal channels per unit, 20 A per output.
Built-in circuit protection.
IPx5 water ingress protection.
Dimensions, hxwxd:

128 x 200 x 45 mm / 5 x 7.9 x 1.8 inch

Terminal block for MOI, 6-way 80-911-0041-00

Seal boot for MOI, 6-wire, silicone 80-911-0034-00

CZone Output Interface (OI)

Product code 80-911-0009-00

80-911-0010-00

Output Interface with connector and protective boot

Output Interface only

The Output Interface provides an intelligent replacement for traditional circuit breaker and fuse panels. It has six high power, robust output channels which provide the power supply, control and fusing for a circuit as well as integrating many other features such as timers and dimmers. Connection to the unit is simple: a large 6-way plug allows connections to cables of up to 16 mm² (6AWG) in size, or multiple smaller conductors. No need for specialised crimp terminals and expensive crimp tools to be carried for terminations to CZone, just a blade screwdriver. A protective flexible boot offers protection to the connections from harsh environment conditions.

CZone Output Interface (OI)

4 levels of backup fusing including manual override (as required by ABYC).

Multiple channels can be bridged together to offer higher current switching.

Power consumption 12 V: 85 mA (standby 60 mA).

Dimensions, hxwxd:

128 x 200 x 45 mm / 5 x 7.9 x 1.8 inch

Small, non-metallic, easy to install case.

IPx5 water ingress protection.

6 x 20 amps circuits.

Programmable software 'fuse' sizes.

Terminal block for MOI, 6-way 80-911-0041-00

Seal boot for MOI, 6-wire, silicone 80-911-0034-00

CZone® Network Components

AC Output Interface (ACOI)

Searching for a simplified way to network, monitor and control onboard AC circuits? The AC Output Interface does it all and provides circuit protection for onboard AC devices. It is easy to install, configure and operate the digital control system with pre-wired components for quick connections.

This gives you a customizable solution to suit unique installation and application needs, including 'night operation' as well as control at multiple locations. It has eight outputs (up to 50 A each), supports multiple pole designs and has two separate buss feeds. To facilitate things, status LEDs and manual bypass are located right at the enclosure.

- Circuit status and run current displayed for each circuit.
- Customizable to suit installation requirements.
- Pre-wired for quick connection.
- Staggered start up of loads.
- 110 V, 240 V, 110/220 V.
- Supports multiple pole designs, i.e. double, triple, four pole.
- Utilizes standard DIN rail mounted components for circuit protection and control.
- Can support two separate buss feeds (i.e. 2 load groups) in one box
- Delay before circuits come on to allow generators to come up to speed.
- Provides circuit protection and control.
- Status LEDs at enclosure.
- Manual bypass at enclosure.
- Provision for MCB/RCDs.
- Timers.
- 50 or 60 Hz.

Sample AC control screen.

Product code

80-911-0069-00 For quotation purposes only, contact Mastervolt for custom requirements.

ACOI standard

8 x 50 A relays protected with 10 A MCB's.

Pre-wired.

Current monitoring on each channel.

IPx5 enclosure.

LED status indicators for each input.

Dimensions, hxwxd:

430 x 276 x 186 mm / 17 x 10.9 x 7.3 inch

Product code 80-911-0082-00 80-911-0096-00

Brown tails (APAC/Europe)
Black tails (US)

ACOI DIN rail mount

8 x 50 A relays.

Fitted with 600 mm tails.

Cost effective solution, own enclosures and MCB's can be sourced.

Current monitoring on each channel.

Dimensions, hxwxd:

77 x 160 x 60 mm / 3 x 6.3 x 2.4 inch

AC Mains Interface (ACMI)

A sophisticated source selector or transfer switch, the AC Mains Interface enables the user to specify the AC power source (generator, inverter, mains).

Developed for use with the CZone digital control system, but may also be used as a stand-alone device.

The ACMI can be programmed to automatically change the supply source when the current rating is exceeded, and includes a manual override and user-friendly display screen that ensures easy current, voltage, frequency, and power monitoring. Other features include six monitored, over-current protected main power inputs of up to 100 A each, as well as two outputs, which enables two separate load groups and a parallel option for use with a single source. To simplify installation, the ACMI comes prewired.

- Six source inputs up to 100 A (e.g. 2 x mains, 2 x generator).
- Monitoring of channel status (on/off/fault).
- Provides circuit protection and control.
- Manual override at enclosure and via remote panel.
- Customizable to suit installation requirements.
- Supports multiple pole designs, i.e. double, triple, four pole.
- 110 V, 240 V, 110/220 V.
- IPx5 enclosure.
- Utilizes standard DIN rail mounted components for circuit protection and control.
- Current, voltage, frequency and power monitoring incorporated (six channels).
- Physical and software lockouts between source controls (prevents two sources from becoming connected).
- Reverse polarity and bad power supply alarms including auto disconnect and lockouts.
- Two outputs (load groups), allows for two separate load groups with parallel option for use with single source.
- Auto changeover.
- Provision for RCD's.
- Load shedding.
- Status LEDs at enclosure.
- Pre-wired for quick connection.
- Timer controls.
- 50 or 60 Hz.

Product code

80-911-0068-00 For quotation purposes only, contact Mastervolt for custom requirements.

ACMI standard

Three inputs: 1 x 16 A mains, 1 x 32 A mains, 1 x 50 A generator parallel.

Two load groups: 40 A.

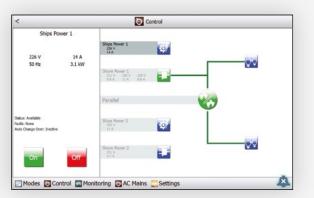

230 V AC 50 Hz.

Current, voltage, frequency and power monitoring incorporated.

Manual override panel on enclosure.

Dimensions, hxwxd:

430 x 540 x 186 mm / 17 x 21.3 x 7.3 inch

Sample AC mains screen.

Wireless Interface

Monitor and control your onboard systems from your iPad

iPad® is a trademark of Apple Inc.

The Wireless Interface allows your iPad to interface with the onboard CZone® system for full monitoring and control of the electrical equipment via a clear and intuitive display. The interface acts as a hub for the seamless connection between the two popular communication networks of MasterBus and CZone®.

FEATURES

- User-friendly homepage to monitor and control onboard circuits.
- Integrated control and monitoring of Mastervolt power products including battery chargers and inverters.
- Monitor AC/DC power and battery data.
- Monitor tank levels.
- Receive visible alarms.
- Connect a maximum of three devices simultaneously.
- Ability to personalise homepage to display favourite circuits, modes and monitoring.
- Connects to CZone or MasterBus network for control and monitoring of systems.
- Customise your layout.
- The Wireless Interface acts as the hub between

 MasterBus/CZone networks and local WiFi devices.
- Ethernet connection to connect to other LANs.
- USB connection for configuration updates.
- Power cable and aerial included.

NOTE: WI MasterBus connector required for MasterBus connection.

CZone® Design & Configuration Made Easy

CZone's leading configuration process is relatively easy and all technical customers are offered training so they can design and program CZone systems quickly. Generally generating a configuration and programming a system is both time consuming and complex. Most digital control and monitoring providers required highly trained technicians to program and commission installations, making them time consuming, inflexible and far more costly. Easy configuration with CZone means technical customers can provide this service themselves ensuring the system is setup quickly and the end customer receives industry leading service.

CZone Configuration Tool

The CZone Configuration Tool software is available to technical CZone customers from the CZone portal at <u>downloads.czone.net</u>

CZone favourites tool Tool

User-friendly CZone tool for PC.

- Allows full customization of CZone app home page.
- Import multiple images for your own layout.
- Easy drag and drop of circuits and alarms onto application image.
- Configure network settings on wireless server.
- Create user profiles for logging into the CZone app.

CZone® Accessories

Single T-connector

Connects a single device into the NMEA 2000 backbone.

Product code 80-911-0029-00

2 Way T-connector

Connects multiple devices into the NMEA 2000 backbone.

Product code 80-911-0047-00

4 Way T-connector

Connects multiple devices into the NMEA 2000 backbone.

Product code 80-911-0048-00

Blanking Caps

Protects unused T-connectors from dust and water.

 Male
 80-911-0050-00

 Female
 80-911-0051-00

Terminating Resistors

Use at either end of the NMEA 2000 backbone.to complete the network. Each network must have a male and female terminator.

 Male
 80-911-0031-00

 Female
 80-911-0030-00

90° Elbow Connector

Space saving connector for modules, displays and cabling connections.

Product code 80-911-0046-00

NMEA 2000 Power Isolator

Used for isolating power between two independent NMEA 2000 networks. Reduce battery current draw by powering one bus off while the other remains operational, or can be used to assist with voltage drop issues on long networks.

Backbone Cable

Special low voltage drop backbone cable ensures ultimate reliability for your NMEA 2000 network.

Heavy Duty Current Transformer

Max. current 150 A AC. CT-HD is available for systems with large mains cables, too large for CT-10-3 (order separately). Dim.: \emptyset 47 x 10.5 mm / 1.85 x 0.4 inch. Hole size: 32 mm / 1.25 inch.

Product code CT-HD

CZone Network Bridge Interface

For isolating sections of a NMEA 2000 network to decrease standby current draw. Isolation when bridging between two CAN networks, (e.g. connecting CZone to Simrad Simnet). For expansion of the NMEA 2000 network when the maximum node limit for the network has been reached (node = any device connected to the NMEA 2000 network). Once fitted, 40 additional nodes can be added.

Product code 80-911-0057-00

Surge Protection Module

Protect your electronics from being damaged by harmful high voltage spikes. When fitted to the battery supply, these modules look for sudden increases in voltage then switch into protection mode to absorb and suppress the high energy spike.

CZone MasterBus Bridge Interface

The CZone MasterBus Bridge Interface physically connects the MasterBus and CZone networks together, enabling the two networks to communicate and act as one. This provides seamless control and monitoring of Mastervolt power electronics from CZone displays or partner products.

FEATURES

- Control of Mastervolt inverters and chargers from CZone displays, switches or partner products.
- Display MasterBus acquired systems information such as tank and power levels on CZone displays.
- Transfer of alarms between both systems.

Delivered with

MasterBus cable adapter, MasterBus terminator, user's manual

Please contact Mastervolt or your local dealer for possibilities in your specific application.

CZone® Integration Partners

CZone has partnered with leading manufacturers of multifunctional displays, such as Navico (Simrad, B&G, Lowrance), Mercury, Volvo Penta, Garmin, Raymarine and Furuno. This makes it even easier to monitor and check energy systems and circuits on board.

CZone technology is integrated with easy-to-read graphics into chartplotters and multi-function displays. View CZone monitoring data, tank levels and battery capacity alongside radar, fish finder, video and chart plotter information or navigate to the CZone page to operate any circuit from the intuitive control page.

Integrate various sonar technologies, autopilot, connectivity, apps, engine data and multimedia.

CZone mode controls, visible on the touchscreens, allow multiple circuits to be turned on and off with a single touch, all customisable to your needs.

With CZone technology, control and monitoring is available at your fingertips, at the helm or flybridge, at desired locations on the boat or vehicle, programmed into the remote key fob, or from an app on your tablet.

Mastervolt Monitoring: A window into the life of your batteries

Unexpected flat batteries are never a good start to the day. A Mastervolt battery monitoring system brings an end to nasty surprises. A clear display shows performance, consumption and available battery capacity. Management of larger, complex systems is also available. This includes monitoring and operation of multiple functions such as AC and DC power provision via the generator, mains or main engine. The choice is yours.

A choice of instruments for different needs

Measuring the actual amount of energy remaining in a battery is a complex task, different to simply checking the level in a water or fuel tank. Many factors influence how much energy the battery can still supply, including its age, the surrounding temperature and the intensity of the loads connected to the battery. Although a voltmeter can give a rough indication of the battery's condition, there is a more accurate and reliable way to obtain information - via one of Mastervolt's battery monitors.

Available in four different models:

MASTER-TIP

A Mastervolt battery monitor can also function as an active warning system.

A potential-free contact can give a signal to an acoustic alarm or even an automatic start/stop system for the generator.

■ BattMan Lite

An affordable battery monitor that does exactly that: providing critical information about the status of your battery bank under all circumstances.

Additionally it will warn you when your battery bank is empty.

■ BattMan Pro

Also displays the remaining time until your battery needs to be charged and stores special battery status events.

■ Masterlink BTM-III

Provides an accurate indication of the voltage, current, amp-hours, remaining time and remaining capacity of battery bank 1, and the actual and estimated capacity of battery banks 2 and 3. The built-in microprocessor calculates the remaining capacity and stores historic data.

■ MasterShunt + EasyView 5

MasterBus integrated battery monitor collecting detailed information on the status of your batteries. The MasterBus remote panel with touchscreen control provides information on the charge process as well as other system information.

From the sun to your alternator: you decide how!

Whether you are on a trip across the world or just on the move for a few days, alternative sources of energy are indispensable in order to remain independent of grid power: in other words, you need a mobile source of electricity. Mastervolt has multiple solutions for generating electricity, from solar charge regulators to high-output alternators.

ALTERNATORS AND CHARGE REGULATORS

Mastervolt's alternators and charge regulators ensure you get the most out of your propulsion engine. An ideal alternative for a generator.

124 ALPHA COMPACT

Alpha Compact 'automotive style' alternators provide an easy fit on factoryinstalled PTO (power take-off) brackets, available from most engine manufacturers.

125 ALPHA

Standard alternators only supply the specified capacity at a high rpm. The Mastervolt Alpha alternator is specifically designed for powerful charging, even at low rpm and high ambient temperatures. It is suitable for various installation methods, and also available as a multi-belt model.

126 ALPHA PRO

This charge regulator maximises the capacity of the alternator and ensures the battery bank is optimally charged via the 3-step+ charge method. It is suitable for 12 V and 24 V, MasterBus compatible and appropriate for alternators up to 400 amps charge current.

RECOMMENDED FOR:

RECOMMENDED FOR:

RECOMMENDED FOR:

Generate

SOLAR CHARGE REGULATORS

Mastervolt solar charge regulators ensure a maximum yield from the often highly irregular availability of sunlight.

130 SOLAR CHARGEMASTER

The Solar ChargeMaster series SCM includes two types of charge regulators: PWM charge regulators with an excellent price/quality ratio, and MPPT modes for medium to large systems. The MPPT version gets more energy from the available sunlight than the PWM models, with the same number of solar panels.

RECOMMENDED FOR:

Alternators and Charge Regulators: For rapidly recharged batteries

The existing alternator on the main engine is designed to charge the starter battery. As a result the combination is not ideal for fast and full charging of other batteries, especially if you want to charge the batteries over a short time or when powering a heavy load.

There are two options to solve this issue:

Equip the standard alternator with a Mastervolt Alpha Pro charge regulator. This charge regulator maximises the output of alternators by regulating the alternator in a way that ensures the batteries receive the optimum charge. The proven 3-step+ charge method guarantees fast and safe charging of your batteries.

You can also choose a powerful second Mastervolt Alpha/ Alpha compact alternator with Alpha Pro charge regulator. This combination was specifically designed for charging service batteries, and allows you to charge quickly and turn off your engine when you want.

Alpha Pro Charge Regulator

- Suitable for 12 and 24 V.
- Including plug & play connection cable, an adapter cable for Bosch alternators is optional.
- The Alpha Pro charge regulator is suitable for alternators up to 400 amps charge current.
- Automatic voltage and temperature compensation.
- 'Keep alive' function for tachometer.
- MasterBus compatible.
- 3-Step+ charging technology for fast and complete charging.

Alpha Alternator Series

- Fast and complete charging of all batteries.
- Power supply for all consumers.
- 12 V and 24 V versions.
- 75 A to 150 A charge current.
- Delivered with Alpha Pro charge regulator for optimal performance and longer-lasting batteries.

Using a Battery Mate, Charge Mate, BI battery isolator or a Mac Plus in conjunction with an Alpha alternator, makes it possible to easily charge two or three separate battery banks simultaneously.

Alpha Compact Alternator Series

- Plug and play solution.
- Suitable for high ambient temperatures.
- Patented magnetic design.
- 40 % lighter and 25 % more compact than conventional alternators.
- High charge current at idle RPM.
- Cable and electronics protected against oil, moisture and dirt.
- Wide range of accessories available.
- Models with suffix "VP" are a perfect fit for Volvo Penta engines.
- Models with suffix "MB" are a perfect fit for Medcedes Benz engines.

Alpha Compact "automotive style" alternators provide an easy fit on factory-installed PTO (Power Take-Off) brackets available from most engine manufacturers. If space is limited, the Alpha Compact can also be used to exchange the stock alternator for a more powerful model.

For all engine types

Alpha alternators are equipped with several fixations for customised alternator brackets, available from your installer or engine supplier. Some engine brands come with Mastervolt alternator brackets as an option.

Compared to conventional alternators, the Alpha Compact offers lower weight, smaller dimensions and reduced fuel consumption.

Alpha Pro: Easy to operate

Easy operation LEDs on the body of the charge regulator indicate the charge phase. The Alpha Pro is designed as a 'fit all' solution. Just one unit is needed for both 12 and 24 V applications, with a simple selector switch to set the regulator to the right voltage. The charge regulator can also be used on any other brand of alternator.

MasterBus Connectivity

The Alpha Pro charge regulator is compatible with MasterBus, allowing easy monitoring via an EasyView touchscreen. In a MasterBus system, the voltage drop over the battery cable and the battery temperature is compensated automatically.

Wide range of accessories available

Freewheeling multigroove pulleys are available in various diameters and widths for an optimal pulley ratio and belt alignment.

Performs above 40 °C

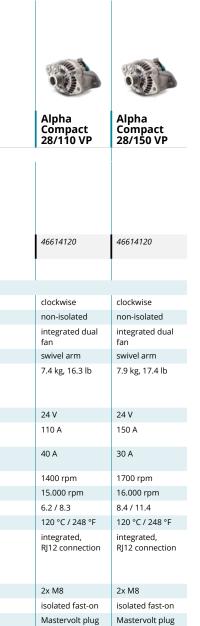

Forced cooling by integrated fan on the pulley. Providing high power even at high ambient temperatures, like in engine compartments.

The Alpha Pro comes standard with connection cable and battery temperature sensor.

Bosch adapter cable 45510500

41500400

option

Connection cable for any other brand of alternator that has a standard Bosch connector

option

When using the Alpha Pro in combination with non-Mastervolt alternators, this alternator temperature sensor may offer additional protection against over heating (see manual for instructions).

Benefits of a Mastervolt Charge Regulator

- The Alpha Pro charge regulator maximises the output of Mastervolt Alpha alternators or any other alternator by regulating the alternator in a way that the batteries receive the optimum charge. The proven 3-step+ charge method used by all Mastervolt battery chargers guarantees fast and safe charging of your batteries.
- The Alpha Pro helps to cut emissions by requiring less run time because it maximises the power from any alternator. A battery can be charged quickly even at very low RPM, especially when connected to an Alpha series alternator. By connecting the Alpha Alternator to a Battery Mate or battery isolator, several battery banks can be charged simultaneously.

The charge regulator measures the battery temperature and

adjusts the charging process accordingly, resulting in a safe and fast charge. Therefore the battery is always kept in good condition. CHECK THE MASTERVOLT SITE FOR

MASTERVOLT.COM/TECHNICAL-

The sun as an additional energy source

Solar cells provide power from sunlight. This renewable energy source boosts your independence and also helps keep your battery in optimal condition. Mastervolt Solar ChargeMaster charge regulators maximize yield from the often very irregular supply of sunlight. Robust power electronics convert the energy from the solar panels, taking the charge status of the batteries into account.

Efficient, Reliable and Safe

Mastervolt's solar charge regulators are suitable for energy systems with system voltages of 12 V, 24 V and 48 V (SCM60 MPPT-MB), and charge any battery type, including Mastervolt Lithium Ion (MLI) batteries. They ensure an optimal and efficient charge cycle and are highly reliable. The 3-step+ charging method guarantees an extra-long lifespan for your batteries. A MasterBus connection is available for optimal integration within the energy system.

Versatile and Flexible

Mastervolt solar charge regulators can be used flexibly to complement your energy system, or in places where no electricity is available, such as remote holiday cottages or chalets. In addition, the solar charge regulators are a perfect mobile solution for campers, speciality vehicles, yachts and traffic & information signs. They are also ideal for professional applications at remote petrol stations, telecom relay stations or offshore units.

The Solar ChargeMaster series comprises two charge regulators based on PWM (Pulse Width Modulation) technology and two models that are equipped with MPPT (Maximum Power Point Tracker) technology.

The robust PWM charge regulators offer a great solution for simple power systems, using lead-acid batteries. Unlike other PWM regulators, the Mastervolt PWM regulators are compatible with negative grounding, making them especially suited for marine and mobile applications.

For advanced systems, Mastervolt solar regulators with integrated Maximum Power Point Tracker draw the maximum output from your solar panels. The MPPT models are suitable for both lead-acid and Lithium Ion batteries in 12 V, 24 V and 48 V.

Which Solar ChargeMaster is best for your application?

■ PWM models

The SCM20 and SCM40 PWM models are both suitable for 36 cells panels (12 V systems) and 72 cells panels (24 V systems). A clear integrated display, suitability for high ambient temperatures and compatibility with negative grounding. Recommended PV power ranges from 360 Wp to 1440 Wp.

MPPT models

The SCM25 MPPT is Mastervolt's smallest MPPT charge regulator. With 200 to 700 Wp in solar panels, switchable output and buzzer, this Solar ChargeMaster is very well suited to small and medium systems. The innovative MPPT technology charges your batteries up to 30 % faster than PWM regulators – with the same number of panels.

The SCM60 MPPT-MB is the largest MPPT solar charge regulator in our range. With 600 to 3600 Wp in solar panels, connections for 12, 24 and 48-volt battery banks and an integrated MasterBus connection, this Solar ChargeMaster is perfect for large and medium-sized systems. Besides the traditional 36 and 72-cell panels, the MPPT models are also ideal for the inexpensive 60-cell panels.

FEATURES

- High efficiency: your batteries are charged quickly.
- Capacity for solar panel configurations of up to 3600 Wp.
- Suitable for AGM, Gel and flooded batteries.
- Fast and flexible setting of battery type.
- Battery temperature sensor for long lifespan of your batteries.
- Automatic detection 12 V, 24 V and 48 V (SCM60 MPPT-MB).
- Switchable output.
- Noiseless operation.
- Large, clear LCD display.
- Fully protected against overheating, over load, high/low battery voltage, high/low PV voltage, short circuit and reverse polarity.

Additional features MPPT models:

- Charges up to 30 % faster with the same number of solar panels.
- Less cables, quick installation and lower losses.
- Suitable for all solar panels, including the inexpensive 60-cell panels.
- Suitable for humid environments (IP23).
- Also suitable for Mastervolt Lithium Ion (MLI) batteries.
- Audible signal (SCM25 MPPT).
- Monitoring and control via MasterBus (SCM60 MPPT-MB).

MASTER TIP

The innovative technology in the Mastervolt MPPT charge regulators increases the efficiency of the solar panels. As a result, Mastervolt MPPT regulators charge the batteries up to 30 % faster.

When you wish to stay connected

Whether you are looking for a safe connection with the electricity grid or would like to automatically select the right energy source, Mastervolt has the solution. With our extensive range of high quality grid connections, cables, isolating transformers and transfer systems, a seamless power supply is guaranteed.

AC TRANSFER SYSTEMS

A Mastervolt transfer system regulates the power supply from various energy sources and automatically selects the right source at the right time.

136 MASS SYSTEMSWITCH

Complete system solution up to 16 kW, with automatic transfer system to prevent damage to your inverter. MasterBus compatible and also suitable for systems from other brands.

136 MASTERSWITCH

The Masterswitch has two AC inputs and one or two outputs up to 25 kW.

ISOLATION TRANSFORMERS

Professional galvanic isolation prevents corrosion of metal parts and enhances safety. Mastervolt's isolation transformers help protect your valuable investment and provide solid earthing.

140 MASS GI

Lightweight and highly compact with a high yield and low heat generation. With Soft Start function and parallel switching for higher capacities.

140 **IVET**

High-quality isolation transformers for built-in installation, suitable for capacities from 3.5 kW to 22 kW. Also available with Soft Start and automatic transfer system.

RECOMMENDED FOR:

Connect

POWER CABLES AND ADAPTERS

Mastervolt provides a comprehensive range of products for high-quality connections to the grid with a focus on safety, reliability and ease of installation.

143 POWER CABLES, EXTENSION CABLES

Hard-wearing, UV-protection and equipped with integrated plugs. The power cables feature integrated LED power indicators. Available in lengths of 15 and 25 metres.

143 GRID CONNECTIONS

Mastervolt's stylish and easy-to-install stainless steel grid connections are available for 16 A/230 V and 32 A/230 V.

143 ACCESSORIES

Mastervolt offers various accessories to complement your cables, including plug adapters and splitters, with or without power indicators. The 16 A power cables are supplied in a stylish bag with leather handles (also available separately).

Mastervolt Transfer Systems: Manages AC Power Sources

A Mastervolt transfer system forms the heart of your AC system and regulates the power supply from the electricity grid, generator or inverter. It also automatically selects the right energy source at the right time.

Mass Systemswitch: The complete system solution

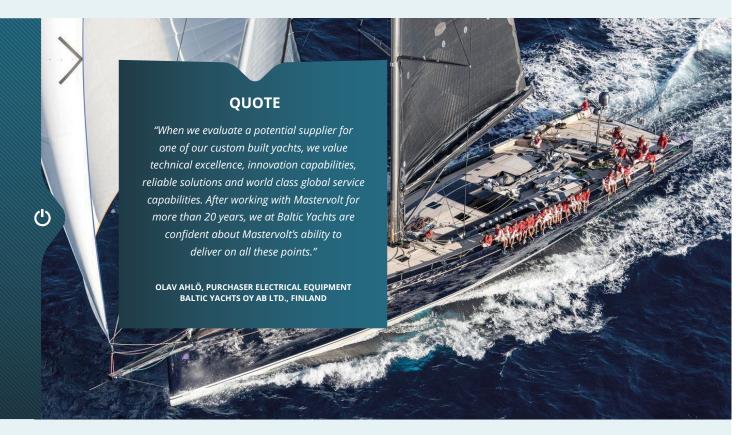

The Mass Systemswitch automatically transfers three available AC power sources to the right outputs. As well as providing more comfort on board, the automatic transfer also has a safety function: the transfer relay prevents short-circuiting between the various AC sources. The Mass Systemswitch 16 has four outputs: 'generator only', 'power', 'shortbreak' and 'inverter only'.

- Three AC inputs; for example inverter, grid power and generator.
- Four outlets to AC power groups.
- Automatic switching.
- Power transfer from 4.5 kW to 16 kW, input/output from 25 to 63 A.
- Information source for central energy management via MasterBus network.
- MasterBus compatible.

Masterswitch: The simple solution

Masterswitch offers you the choice of two energy sources, such as the inverter or grid power, with one of the inputs always having priority. The Masterswitch is available in multiple capacities, and all models are suitable for use with a generator by means of an adjustable transfer delay.

- Two AC inputs; for example grid power and inverter.
- Adjustable transfer delay for generators.
- One outlet to AC power group.
- Automatic switching.
- Power transfer up to 25 kW, input/output from 20 to 125 A.

Smart Electronics

The intelligent electronics control the switching to ensure an optimal energy management. Its double pole relay is durable and extremely safe.

LED indications on Systemswitch

Read-out of the basic functions on the display, including indication of available power source, generator, grid power or inverter and 'load on inverter' function.

Central Energy Management

The EasyView 5 with intuitive controls and color touchscreen shows key system information at a glance. Provided with a multi-language menu, the home button gives easy access to your favorite pages. System alerts and alarms are tracked.

Suitable for MasterBus

As the Mass Systemswitch is suitable for MasterBus, all information can also be read-out on, for instance, a EasyView display, including the status of the charge current and the inverter.

Advantages of the Mastervolt transfer system

- Activating and selecting AC sources: Grid power, inverter and generator (adjustable to amperage of grid power, for instance 6 A).
- Prevents parallel connection between inverter and other AC sources, avoiding damage to the inverter.
- Fully compatible with Mastervolt systems, and suitable for installations from other brands, other generators and/or inverters.

IP55

A safe connection between grid power and your onboard network

A safe connection between vessel and shore installation is an essential part of your electrical system. A galvanic electrical isolation between shore power and the on board power prevents any electrical corrosion of metal parts while keeping your system earthed.

Both the unique HF technology-based Mass GI and the reliable 50 Hz transformer-based IVET series offer you complete protection against galvanic corrosion.

Select the right transformer for your system:

Lightweight Mass GI Transformer

The Mass GI is supplied with the latest high-frequency switching technology as well as Soft Start for peak loads when connecting to the grid.

- Ultra modern high-frequency electronic switch technology.
- Lightweight and compact.
- Integrated Soft Start function.
- Connect to voltages from 90 to 255 V and from 45 to 65 Hz.
- Units can be parallel coupled for higher capacity.
- Higher efficiency results in limited heat development.

IVET Heavy-duty Series

High-output E-core isolation transformer without casing, for self installation. The product is multi tap, meaning you can handle 120/230/240 V going in and out.

- High-quality isolation transformers without casing for self installation.
- Optional Soft Start, in synthetic casing.
- Capacities of 2.5 kW to 22 kW.

Soft Start for the IVET heavy-duty series

The Soft Start automatic switch suppresses the inrush current from the transformer and prevents the fuse from blowing. Mastervolt recommends to install the IVET heavy-duty isolation transformer with Soft Start.

Higher capacity via parallel switching

Parallel switching of the Mass Gl units increases the AC power capacity. Two 16 A/3.5 kW units ensures 32 A/7 kW, four units give 64 A/14 kW.

Automatically adjust the grid power

Mastervolt supplies three automatic switching systems for capacities of 6, 9 and 13 kW that - combined with an IVET transformer - adjust grid power to the onboard system. As a result, a 230 V/50 Hz system can easily function with an American or Caribbean AC connection. Do ensure that the frequency on board (50 or 60 Hz) is the same as the frequency of the incoming current.

Modern transformer technology: Light, silent, reliable and easy

The Mass GI is supplied with the latest high-frequency switching technology as well as Soft Start for peak loads when connecting to the grid. LED lights on the casing indicate load and overload. The transformer can be remotely monitored via a MasterBus compatible display (EasyView 5). The Mass GI is 75 % lighter and 60 % smaller compared to low frequency transformers.

Install anywhere

With its robust aluminium casing, the Mass GI isolation transformer can be fitted in any position on wall or floor. No rubber mountings are necessary because the unit does not vibrate or hum. The Mass GI also features professional connections with strain relief cable glands.

MASTER-TIP

- Determine AC power and onboard current: 230 V, 120 V or both?
- Determine the capacity: maximum load with onboard power usageamount of amps and kW.

Electrical Cables and Adapters: Your life line to the grid

A safe and carefree power connection is your ticket to a comfortable and smooth onboard experience during your stay. The 230 V grid is the source to run your appliances and charge the batteries. Mastervolt offers you everything you need for a high quality grid connection, with safety, security and performance given the highest priority.

Practical tips

- Based on the maximum load for onboard power consumption, choose either a 16 A or a 32 A connection.
- For high loads choose multiple parallel connections to the grid.
- Choose the appropriate connection: Standard is an earthed two-pole plug or the more familiar blue CEE three-pole plug.

You need:

- Cable between the grid and application: Industrial, electric triple-core cable with European colour coding (brown, blue, yellow/green) with a thick synthetic sheath.
- An onboard connection: Perfectly protected easy lock system for grid power plug.
- Required safety measures.
- Shore Fix fuse/earth leakage circuit breaker; basic fuse between AC plug and onboard system (product code 124001000).
- High or low frequent isolation transformer isolation of your network and the grid;

Technical Terms - glossary

Absorption phase

The second stage in a modern 3-step+ charging process.

Batteries are charged from around 80 %up to 100 % during this stage. Voltage is somewhat lower than the gas voltage of the battery, which is 2.4 volt per cell at 20 °C (or 14.4 volt for a 12-volt and 28.8 volt for a 24-volt battery). The absorption phase follows the bulk phase and is, in turn, followed by the float phase.

■ ABYC standards

The American Boat & Yacht Council is a non-profit organisation that represents American builders. It sets standards and gives recommendations for nautical equipment (including electrical equipment) on pleasure vessels with the goal of enhancing safety. The ABYC therefore issues certification for products.

■ AGM battery

Battery in which the electrolyte (a mix of water and sulphuric acid) is largely absorbed in glass fibre matting. As these batteries are entirely maintenance-free and do not normally produce gas, they can be fitted anywhere and ventilation is usually unnecessary. Thanks to their construction, AGM batteries can be swiftly discharged while providing a very powerful current. This makes them highly suitable for systems that require high levels of current, such as bowthrusters, winches and engine starting.

■ Alarm contact

A contact in a battery charger or inverter that is activated when an external or internal malfunction occurs.

■ Alternating current (AC)

AC is the electricity that for example comes out a socket in your home. Other terms used for AC include shore power, generator power or inverter power. AC voltage changes polarity with a given frequency: In Europe, for instance, the polarity of the electrical voltage is reversed 50 times per second.

The supply therefore has a frequency of 50 hertz (Hz).

■ Amps (A)

The unit that measures the current following through a circuit. The current can be calculated by dividing the voltage by the resistance of the consumer. A resistance of 6 ohm and voltage of 12 volt gives a current of 2 amps.

■ Amp-hour (Ah)

The unit that denotes the capacity of a battery, calculated by multiplying current in amps by the duration of the discharge in hours. For example: If a battery delivers a current of 5 amps in 20 hours with the voltage constantly above 10.5 volt, this amounts to $20 \times 5 = 100 \text{ Ah}$. The capacity of a battery usually depends on the amount of lead and battery acid it contains.

■ Auto-ranging

The term auto-ranging refers to the ability of a programmable DC power supply to provide its rated maximum power over a wide range of output voltage and current conditions. Autoranging ensures perfect fully automatic operation anywhere in the world, regardless of the available mains voltage (80-275 V AC, 50 or 60 Hz). All Mastervolt battery chargers are featured with this function.

В

■ Battery

Converts chemical energy into electrical power and vice versa. The nominal voltage of a battery is 2 volt, and higher voltages are achieved by connecting several batteries in series. For instance, six 2-volt batteries can be combined to provide a nominal voltage

■ Battery acid

of 12 volt.

An electrolyte that consists of water and sulphuric acid. The specific gravity of battery acid in a charged battery varies between 1.28 and 1.30.

■ Battery charger

Used to charge batteries. Its capacity should be at least 15 to 25 % of the battery capacity with a flooded battery and max. 30 % with an AGM battery, up to 50 % with a Gel battery and up to 100 % with a Lithium Ion battery.

■ Battery Management System

A natural phenomenon of Li-ion batteries is the natural imbalance between stronger and weaker cells. In the charging process, one or more cells will reach their maximum charge level faster due to this imbalance, while others do not get fully charged. The lower cells will be discharged faster, causing the battery to be empty sooner due to under-voltage and so reducing the lifespan of the battery. To prevent this, Mastervolt Lithium Ion batteries are equipped with a Battery Management System that automatically compensates for the imbalance between the cells and increases the lifespan and the total capacity of the battery.

■ Battery monitor

Indicates the battery status. Mastervolt offers a selection of 4 models. Firstly, the BattMan with spray-proof display and energy meter, which is available in two models. Next is the Masterlink BTM-III with detailed battery information via the LCD display and LED bar. The modern MasterShunt combined with the EasyView 5 provides detailed information on voltage, current, and historical and user data. It is easily installed within the MasterBus network, with touchscreen controls for all functions. See pages 116-117 in this Powerbook for more information on the battery monitors.

■ Bulk phase

The first stage in a modern 3-step+ charging system. The output current of the battery charger is 100 % during this stage, while voltage depends on the power remaining in the battery.

The bulk phase is followed by the absorption phase.

■ BV approval

Bureau Veritas is a French classification society for shipping, passenger vessels

and some large yachts. The requirements in terms of safety and functionality are stringent and approval is required by many insurance companies. Most Mastervolt equipment exceeds BV's rigorous standards.

current flow.

Cable losses

A loss of voltage resulting from the resistance of the cable. The losses also depend on the

■ CE marking

Marking placed on a product by manufacturers or importers to declare that it meets EU safety, health and environmental requirements. These requirements are derived from European product directives, which have been incorporated into the national legislation of most EU member states. The CE mark therefore shows compliance with a law and is not informal advice. It should be visible on the outside of equipment and suppliers have to make available a declaration stating which requirements of the CE marking the equipment meets. All Mastervolt equipment exceeds these rigorous standards.

■ Charge voltage

Voltage used to charge batteries. On average, it amounts to 14.4 volt or 28.8 volt during the absorption phase and 13.25 volt and 26.5 volt during the float phase, both at 25 °C.

■ Combi

A device that combines a battery charger, an inverter and a transfer system in one.

■ Cos phi or power factor

Specifies in AC systems the degree to which current is out of phase with voltage: The lower this value, the larger the discrepancy.

In a heating element, for instance, the current is in phase with the voltage, so the cos phi is 1. In a motor, however, there is a divergence, and cos phi tends to be 0.8 or sometimes 0.6. The lower the cos phi, the more current is required to supply a given amount of power.

Current

The flow of electrons through a circuit. Electric current is measured in amps.

■ Cycle

The theorectical discharging of a battery from 100 % to 0 %, and recharging back from 0 % to 100 % in one cycle. Twice discharging to 50 % and fully recharging is also one cycle, as is four times discharging to 75 % and fully recharging again. This is all theory however: In practice a battery is discharged not more than 50 %.

■ CZone®

A CZone system decentralises the DC power distribution system, locates circuit control and protection modules closer to loads to shorten cable runs and reduce the size of conductors, significantly decreasing the cost and weight of the electrical wiring harness. The CZone system replaces complex wiring with a single data wire.

■ Digital Switching

Digital Switching is a Mastervolt innovation

that radically simplifies installation, configuration, control and monitoring of onboard electrical systems. This CAN-based platform is proven in the automotive industry and is fully compatible with most A-brand navigation systems. It offers you a range of luxurious and comfortable options, including remote control.

■ DIP switch

A tiny switch usually found on a printed circuit board and used to set the various functions of Mastervolt equipment.

■ Direct current (DC)

Current that only flows in one direction, such as that in a battery, solar panel, alternator or battery charger.

■ DNV-GL approval

Det Norske Veritas is a Norwegian classification society for professional

shipping and offshore activities. The requirements in term of safety and functionality are very strict, and approval is required by many insurance companies. Most Mastervolt equipment easily satisfies DNV-GL's stringent standards. Germanischer Lloyd is a German classification society for professional marine vessels. The requirements in terms of safety and functionality are very strict and this approval is often necessary for insurance purposes.

■ Earth

The electric no-load potential, also called reference

potential. The negative pole of a battery is often connected to the steel chassis of a vehicle or boat, which then serves as the earth. In US English the term grounding is used.

■ Earth leakage switch

Monitors the onboard supply for electrical leakage, switching it off when leakage exceeds 30 milli-amps. An earth leakage switch protects you against an electric shock in the event of contact with a live component.

■ Efficiency

The efficiency of a power source is expressed in percentage terms (%). A device with an efficiency of 90 %, for instance, has 100 % power at the beginning and 90 % at the end. The 10 % that is lost is primarily transformed into heat. The higher the efficiency of an inverter, the longer the batteries will last.

■ Electrolyte

The liquid in batteries, composed of a mixture of sulphuric acid and water. Its specific gravity is 1.280 in a charged battery and 1.100 in a discharged one.

■ 3-Step+ charging

A modern charging technology that has been extended with an extra step in Mastervolt equipment, the Plus phase.

The three steps are:

- Bulk, where the charger supplies maximum power.
- Absorption, during which the charger delivers maximum charge voltage and the battery is charged from around 80 % to 100 %.
- Float, used for battery maintenance and delivering power to connected equipment.

The 'plus' phase is an automatic one-hour bulk phase once every 12 days when the battery is not being used.

■ E-Mark

This regulation is the type-approval test for European automotive

electronics. It includes a variety of testing including RF immunity and emissions, transient immunity and emissions. It now includes a requirement for burst, surge, harmonics & flicker and provides advice and requirements for electrical vehicles. Most Mastervolt battery chargers, inverters and Lithium Ion batteries comply with these requirements.

■ EMC

Short for Electro-Magnetic Compatibility, EMC indicates how much, if any, electromagnetic interference a device may produce and whether it is sensitive to electromagnetic interference from the outside. A good example is that of a battery charger and a microwave oven. The microwave is not allowed to produce more interference than determined by the EMC standard, and the battery charger may not be affected by the interference generated by the microwave. Naturally, the opposite also holds true. Requirements in terms of EMC are established within the CE framework. Mastervolt equipment exceeds these strict requirements.

■ E-Propulsion

Electrical propulsion is growing in popularity and is compulsory in an increasing number of sailing and nature areas. A hybrid version is also available, allowing you to choose whether to sail using a diesel engine or electric motor.

■ Float phase
The final step in a

The final step in a modern
3-step+ charging process.

Although the batteries are fully charged during this phase, they receive a maintenance charge, while the onboard DC circuit is supplied with power. Charge voltage is 2.25 volt per cell or 13.25 volt for 12-volt batteries and 26.5 volt for 24-volt ones at an ambient temperature of 25 °C.

Forced inverter

A function on the Mass Systemswitch. At the push of a button, a part of the onboard consumers are powered from the batteries via the inverter, while the battery charger stays connected to power. The power intake of the battery charger can be regulated via the system panel, up to the point where the maximum for the AC fuse has been reached. The advantage of this system is that heavy-duty consumers such as hair dryers are powered via the inverter and cannot therefore overload the AC fuse.

When such consumers are connected to the inverter, consumption from the batteries is usually higher than the battery charger can supply. This is rarely a problem as major consumers are usually used for a short time and the consumption measured in Ah tends to be low. After the consumer has been switched off the battery charger will recharge the battery automatically.

■ Frequency

The number of times per second that alternating current changes direction, expressed in hertz (Hz).

■ Galvanic isolation

without their grounding or earth coming in contact. Galvanic isolation is best achieved by means of a transformer.

■ Gas voltage

The voltage level at which a battery starts producing gas. At at an ambient temperature of 20 °C, the gas voltage is 2.4 V per cell or 14.4 V for a 12 V battery and 28.8 V for a 24 V one.

■ Gel battery

Batteries where the electrolyte (mix of water and sulphuric acid) is absorbed in a gel. As they are entirely maintenance-free and rarely produce gas, Gel batteries can be fitted anywhere. Extra gas extraction is not necessary. Gel batteries are highly suitable for lighting and as onboard service batteries, and can be charged very quickly thanks to their special construction. With normal use the lifespan of a 12-volt Gel battery is between six and seven years. For the 2 volt traction Gel version, 15 years is not uncommon. A Gel battery is very suitable for (deep) cycle usage.

■ Hertz (Hz)

Unit that measures frequency, i.e. the number of times per second that an alternating current (AC) changes direction. In Europe this is 50 Hz, and in the USA 60 Hz.

■ High-frequency (HF) switch technology

This technology allows incoming alternating current to be rectified into direct current over a diode bridge. The resulting DC voltage is chopped into parts with a high frequency by means of an electronic switch that is turned on and off quickly. This creates a simulated alternating current with a high frequency, 35 kHz (35,000 Hertz) for instance. This AC can be converted to a higher or lower voltage via a very small transformer. The higher the frequency, the smaller the transformer can be. Mastervolt uses HF switch technology in all its equipment, offering major benefits in terms of compactness, weight and efficiency. Another advantage is that you say goodbye to the irritating hum of a transformer.

■ Hydrogen gas

Highly explosive gas mixture of hydrogen and oxygen formed during the charging of flooded batteries with an unsuitable charger. Extra ventilation prevents concentrations from becoming too high.

■ IEC approval

The International Electrotechnical Commission

(IEC) is headquartered in Geneva, Switzerland, and develops general standards for the safety of electrical components and equipment. Although it proposes standards, the IEC is not responsible for their enforcement, which is usually carried out by independent test laboratories.

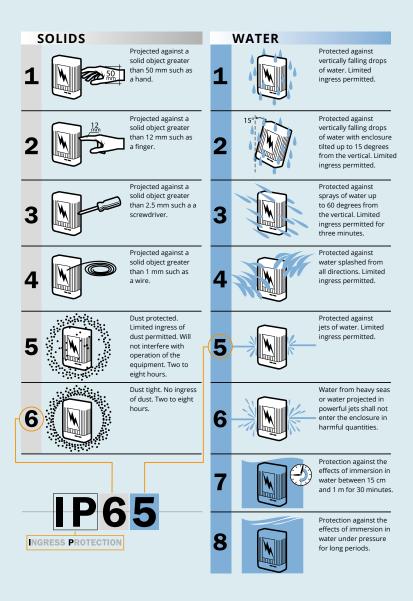

■ Inductive loads

These loads are, for example, the motors in air conditioning systems and diving compressors. They cause the current to flow out of phase with the voltage, a phenomenon also known as phase shift. The degree is indicated by a value, cos phi or power factor, which ranges from 0 to 1 and is inversely proportionate to the size of the lag. In a heating element (which is resistive load), current flows in step with voltage and cos phi is 1. In a motor, however, there will be a lag, as indicated by the typical value of 0.8 - or sometimes 0.6 - for cos phi. The lower the cos phi, the greater the lag, and the more current is necessary to supply a given level of power.

■ Ingress Protection (IP) Ratings Guide

The IP rating system was established by the International Electrotechnical Commission (IEC), an organization for international standards and conformity assessment. The IEC collaborates closely with the International Organization for Standardization (ISO). Although these ratings were initially developed as a way to classify enclosures, they now provide a convenient, practical way to compare levels of sealing. Many electrical products have an Ingress Protection (IP) rating which identifies the environmental factors needing consideration prior to the product's installation.

This is important when deciding when to mount products in a dry and clean environment versus a wet and/or dusty environment. The IP rating indicates the degree of protection provided. The numbers following IP represent levels of sealing and can range from no protection to full protection against dust and water. The table provides a description of the protection at each level.

Example: An IP65 rating can be determined using the table.

- The first number of the rating example, 6, in the gray column means the enclosure is dust tight.
- The second number of the rating example, 5, in the blue column means the enclosure is protected against jets of water.

Inverter

Converts 12, 24 or 48 volt battery power to alternating current at 230 V/50 Hz (or 120 V/60 Hz). This allows appliances such as computers, microwave ovens and TVs to be powered without the need for a grid connection or generator.

■ Isolation transformer

Converts shore power voltage to a higher, lower or equal value to ensure that there is galvanic isolation between the shore power connection and the onboard electrical system. This prevents corrosion and increases safety.

■ Kilowatt (kW)

Unit for electrical power equivalent to 1000 watt.

Ten 100-watt light bulbs consume one kilowatt

■ Kilowatt-hour (kWh)

One kW of electricity used in one hour. This is the most common measurement of power consumption.

■ LED (light emitting diode)

Electronic light with very low power consumption. LEDs are generally available in many different colours and sizes. Mastervolt uses them as signal lights on battery chargers and inverters. The latest generation of LEDs can be used as lights as well and are very low in use of energy.

■ Lithium Ion battery

Lithium Ion batteries have a high energy density and are perfect for cyclic applications. Compared to traditional lead-acid batteries, Lithium Ion batteries offer savings of up to 70 % in volume and weight, while the number of charging cycles is three times as large. Another major benefit of the Mastervolt Lithium Ion battery is that it is equipped with an integrated Battery Management System. The system keeps all the individual cells perfectly balanced, and ensures a long battery lifespan.

■ Lloyd's approval

Lloyd's Register of Shipping is a British classification society for yachts,

professional shipping, drilling platforms, etcetera. Numerous insurance companies require large vessels to be approved by Lloyd's. This means that the vessel and the onboard equipment have to satisfy stringent requirements.

■ MasterBus

MasterBus is Mastervolt's

advanced standard for data communication and integration of Mastervolt components within your electric system. Advantages include complete system integration, easy operation and monitoring, and simple installation with fewer cables. A MasterBus network can be easily extended in a later stage.

■ NiCad batteries

Containing nickel and cadmium, this type of battery is

unsuitable for use on boats due to the high charge voltage required. NiCad batteries will soon be banned because of their cadmium content. N.B. All NiCad batteries are considered to be chemical waste.

■ NMEA 2000

NMEA 2000 is a plug & play communications standard

used for connecting marine equipment and displays within boats. Communication runs at 250 kb-per-second and allows any device to talk to any display, or other device compatible with NMEA 2000 protocols. NMEA 2000 is compatible with the J1939 CANbus network, used on road vehicles and fuel engines.

■ No-load consumption

Power consumed by an inverter when it is not powering any equipment. This is just a few watts with modern Mastervolt inverters and Combis. The lower the noload consumption, the less power is used by the inverter.

■ Ohm

Unit for electrical resistance, indicated by the symbol Ω .

The electrical resistance of an electrical conductor is the opposition to the passage of an electric current through that conductor.

Ohm's law

Gives the relationship between voltage (U), current (I) and resistance (R). In formula terms this is expressed as U=IxR. If two of the three values are known, the third can be calculated.

Overload

A concept related to the safety of an inverter, generator or power connection. A fuse, for instance, ensures against overload. All Mastervolt inverters have electronic protection against overload.

■ Parallel connection

In a parallel connection the current can flow through

multiple circuits. By parallel connecting batteries (positive to positive, negative to negative), the capacity of the battery set is increased, while voltage stays the same. For example, while two 12V/55Ah batteries connected in parallel have a voltage of 12 volt, the capacity is 55 + 55 = 110 Ah.

Peak power

The maximum current that can be supplied by an inverter for short periods of time. This is often necessary, as electric motors can consume up to ten times their nominal power when starting up. Mastervolt inverters can deliver a high peak current, often reaching two to three times their nominal capacity.

Peukert

The name of a German scientist who in 1897 observed that a battery supplies progressively less power as the discharge current increases. Peukert created a formula that gives the number of amphours a battery can supply at a given discharge current and time. Mastervolt battery monitors all take Peukert's law into account, ensuring that you always have a correct overview of your battery's status.

■ Power Sharing

This concept is related to the performance of the charger part of a Combi when connected to the grid or a generator. It involves the automatic power intake regulation of the battery charger when the power is very low. As soon as the power fuse is in danger of being overloaded, the battery charger automatically reduces its output current so that tipping of the power fuse is prevented.

■ Power Assist

A feature found in the Mastervolt Combi series. Power Assist ensures that the power supply to onboard consumers is partially provided by the batteries if the power is in danger of becoming overloaded. It is activated after the battery charger's output has been reduced to zero via the power sharing system in the Combi.

■ RCM approval

Regulatory Compliance Mark (RCM). This means that the product

complies with the requirements of Electrical Regulatory Authorities Council (ERAC) in Australia.

■ Recombination technology

Used in AGM and Gel batteries to make sure that the gas (oxygen and hydrogen) generated by charging is recombined into water. This means that the batteries can be entirely maintenance-free and sealed.

■ RRR approval

The Russian River Register sets standards for products and manufacturers in terms of quality, safety and environmental friendliness. Only products certified by the RRR are allowed onboard vessels sailing on the country's inland and coastal waters.

■ RMRS approval

The Russian Maritime
Register of Shipping
sets standards that products and
manufacturers must meet in order to
be allowed onboard vessels flying the
Russian flag within Russian territorial
waters (seas and inland waters).

The institute is also responsible for related inspections.

■ Self-discharging

The decrease in the capacity of a battery that occurs when no load is connected. A flooded battery loses 1% per day, an AGM battery and Gel battery 2 % per month and a Lithium lon battery less than 3 % per month. The higher the ambient temperature, the more self-discharging will occur. Current leakage due to intense pollution or humidity between the poles can also cause a higher level of self-discharging, so you should always keep the top of your batteries clean and dry.

■ Semi-traction battery

A semi-traction battery has fewer but thicker plates in each cell, compared to starter batteries. Semi-traction batteries supply a relatively lower starter current, but can be discharged more often and to a greater extent (200 to 500 full cycles). This kind of battery is highly appropriate for the combined function of starter/ service battery.

Series connection

A series connection (the positive pole of each battery is connected to the negative pole of the next) increases the voltage of the total battery set. For example, when two 12-volt batteries with a capacity of 55 Ah each are connected in series, the total voltage of the set will be 12 + 12 = 24 volt, while total capacity remains 55 Ah.

■ Sine wave

The alternation of voltage can be graphically indicated by a sine wave. This consists of a line that follows a wave pattern around a horizontal axis, which represents the passage of time and also the points at which voltage is zero. Once the line has traced one entire wave above the time axis and one entire wave below, a whole sine wave has been outlined.

■ Square millimetre (mm²)

Unit in which cable diameters are measured. With a direct current system of 12 or 24 volt, three amps should correspond to one mm² of cable thickness.

For 230 volt systems allow 6 amps for each mm². Both apply for a maximum length of 3 metres.

■ Soft start

Device used to reduce the inrush current of transformers and motors.

■ Standby mode

In this mode the inverter emits a small pulse instead of the usual 230 volt output. It detects when an appliance is switched on and then automatically switches on, supplying 230 volt until the output current falls below a pre-set value. When there is little or no output current, this means that no load is connected and the inverter switches back to stand-by. This system saves a great deal of energy.

Starter battery

Mainly used to start engines. Although these batteries can deliver a high current, they should not be excessively or too frequently discharged and are therefore not appropriate for lighting purposes. AGM batteries are ideal to serve as starter battery and limited cyclic use.

■ Temperature correction

If the battery temperature is lower than 25 °C, the charge voltage should be adjusted upwards. When higher, the charge voltage needs to be reduced. This temperature correction is 30 mV per °C for a 12 V battery and 60 mV per °C for a 24 V one. While this may seem insignificant, it is essential to ensure a long battery life.

■ Temperature sensor

A temperature sensor should be attached to the battery so that the charger can optimise charge voltage with respect to the battery temperature. The charge voltage depends on the battery temperature (see also Temperature correction).

■ Traction batteries

Used for propulsion, powering equipment and inverters, etc. They can be discharged often and completely, and in a Gel version are highly suitable for onboard use. Flooded cell batteries are only appropriate for forklifts, etc.

■ Transfer system

A (frequently automatic) system used to switch between multiple power sources, such as grid, generator and inverter.

■ *UL approval*An American

An American certification

provided by Underwriters Laboratories that is similar to the European CE-mark and mainly focused on safety issues.

■ *Volt (V)*

Unit in which electric potential (voltage) is measured.

■ Volt-amps (VA)

Unit for measuring electrical power.

■ Voltage ripple

A voltage ripple is a small alternating current on top of a direct current, which results in a DC voltage that is not entirely smooth but ripples slightly. While a battery delivers pure direct current without any ripple, this is not always the case with a battery charger. In an old-fashioned battery charger, 50 % of the voltage will contain ripples. A large voltage ripple shortens the lifespan of a battery, which needs to be charged with direct (not alternating) current. In addition, a voltage ripple can interfere with onboard audio, navigation and communications systems. Mastervolt battery chargers supply a flat DC voltage with no more than 0.3 % of ripple voltage.

■ Watt (W)

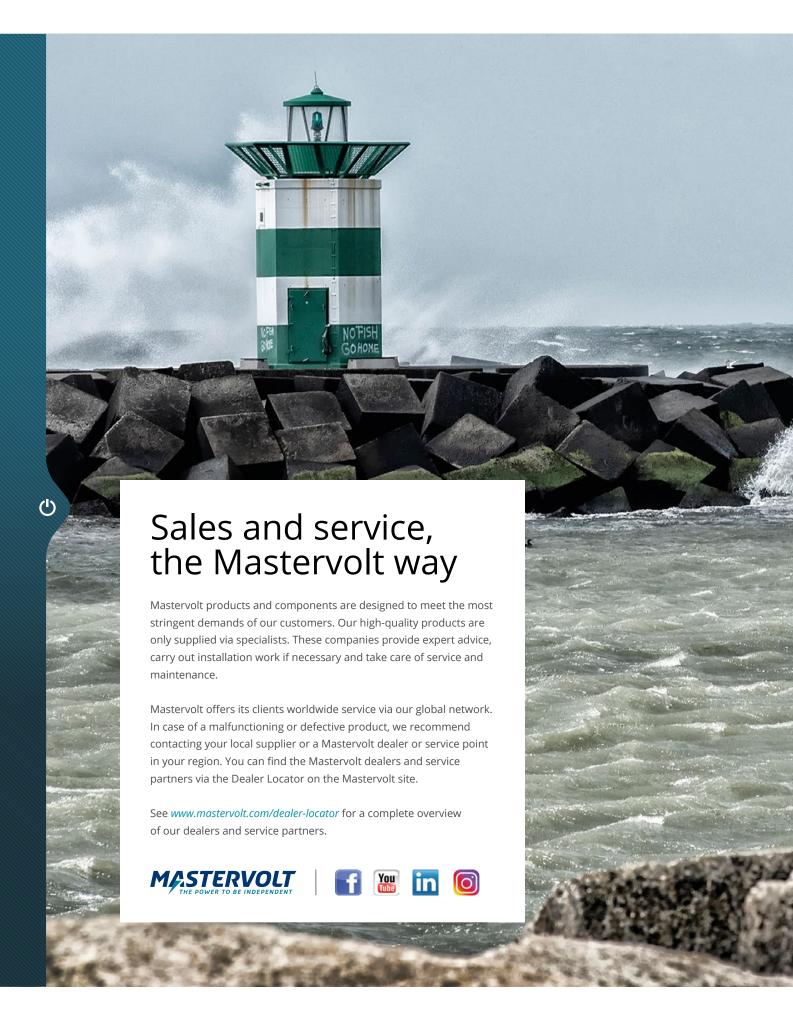

Unit that measures the rate of energy, calculated by multiplying

volts by amps.

■ Watt-hour (Wh)

Measure of electrical power in time. One watt-hour of electricity is equal to one watt of power consumed over one hour. A 10-watt light bulb uses 10 watt-hours of electricity in one hour (see also kWh).
